**Course Learning Objective:**

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

**Objective:**

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

**Rationale:**

The course content of surveying has been designed to provide adequate information to develop competency in a learner to enable prepare maps by conducting chain & compass surveying and prepare land by levelling.

**Objective:**

Surveying is an essential component of the day-to-day work of an Agricultural Engineering Technician. The job includes detailed surveying, plotting of survey data, preparation of survey maps etc. The course content of surveying includes the basic concept horizontal linear and angular measurements and conducting surveys involving horizontal linear and angular measurement with stress on familiarization with various equipment used. It also includes vertical linear measurements to indicate the profile of the land surface by leveling has also been covered in details.

### **Rationale & Objective:**

Keeping in view the recent developments in science and present needs of Agriculture, the curriculum of Refrigeration & Air-Conditioning has been revised so that the Engineers or Technicians may have a better knowledge of Refrigeration & Air-Condition, especially regarding the application of the subject in various fields of Agriculture. An emphasis, in this direction, has been made in the curriculum.

The following topics are so chosen that through their contents the students become able to develop knowledge, skill and technical attitude. It will enable them to distinguish, differentiate, analyse and solve the refrigeration and air-conditioning problems.

**Rationale:**

From Mechanisation is the application of engineering and technology in agricultural operations to do a job in a better way to

improve productivity. This includes development, application and management of all mechanical aids for field production, Water control, material holding, storing and processing. Before knowing these, diploma students are required to know about agricultural operations, procedures and practices.

### Course Learning Objectives:

This Lab course is intended to practice what is taught in theory class of 'Computer Programming' and become proficient in computer programming. Computer programming is all about regular practice. Students should work on solved and unsolved problems listed in the text books, and the problems given by the teacher. Some of the topics that should necessary be covered in lab are listed below.

### Course outcomes:

Student should be able to write code snippets, and then compile, debug and execute them.

<b>Content: Practical</b>		<b>Hrs</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Familiarization with programming environment (Editor, Compiler, etc.)		
<b><u>Unit – 2</u></b>	Programs using, I/O statements and various operators		
<b><u>Unit – 3</u></b>	Programs using expression evaluation and precedence		
<b><u>Unit – 4</u></b>	Programs using decision making statements and branching statements		
<b><u>Unit – 5</u></b>	Programs using loop statements		
<b><u>Unit – 6</u></b>	Programs to demonstrate applications of n dimensional arrays		
<b><u>Unit – 7</u></b>	Programs to demonstrate use of string manipulation functions		
<b><u>Unit – 8</u></b>	Programs to demonstrate parameter passing mechanism		
<b><u>Unit – 9</u></b>	Programs to demonstrate recursion		
<b><u>Unit – 10</u></b>	Programs to demonstrate use of pointers		
<b><u>Unit – 11</u></b>	Programs to demonstrate command line arguments		
<b><u>Unit – 12</u></b>	Programs to demonstrate dynamic memory allocation		
<b><u>Unit – 13</u></b>	Programs to demonstrate file operations		

The language of choice will be C. This is a skill course. More you practice, better it will be.

				<b>External</b>	<b>:</b>	<b>35</b>	

**Rational:**

The course content of surveying has been designed to provide adequate information to develop competency in a learner to enable prepare maps by conducting chain & compass surveying and prepare land by levelling.

**Objective:**

Surveying is an essential component of the day-to-day work of an Agricultural Engineering Technician. The job includes detailed surveying, plotting of survey data, preparation of survey maps etc. The course content of surveying includes the basic concept horizontal linear and angular measurements and conducting surveys involving horizontal linear and angular measurement with stress on familiarization with various equipment used. It also includes vertical linear measurements to indicate the profile of the land surface by levelling has also been covered in details.

<b>Contents: Practical</b>		<b>Hrs</b>	<b>Marks</b>
Eight experiments to be performed in the laboratory:			
Unit -1	<b>LINER MEASUREMENTS</b> 1.1 Study of Essential features of different types of chain and tapes with neat sketch, Aims and Objectives of Surveying.	[02]	
Unit-2	<b>CHAINING</b> 2.1 Testing and adjusting of a metric chain 2.2 Measurements of distance between two points with chain including direct ranging. 2.6 Setting out of different types of triangles with chain and tape. 2.4 Measurement of distance between two points by chaining across a sloping ground by using stepping method and by a Clinometer. 2.5 Measurement of distance by chaining across obstacles on the chain line-A. Pond 2. Building. 3. Stream/River	[08]	
Unit-3	<b>CHAIN SURVEYING</b> 3.1 Setting Perpendicular offsets to various object from a chain line using- Tape, 2. Cross Staff, 3 Optical Square 3.2 Setting /Offsets from a chain line using tape	[04]	
Unit-4	<b>ANGULAR MEASUREMENTS</b> 4.1 Study of features and parts of a prismatic compass and a surveyor compass by drawing neat sketches. 4.2 Testing and Adjustment of Prismatic Compass and Surveyors Compass. 4.3 Measurement of bearings of lines and Determination of included angles using prismatic compass and surveyor compass.	[06]	
Unit-5	<b>CHAIN AND COMPASS SURVEYING</b> 5.1 Setting out of a closed traverse of five sides using prismatic compass given bearing of one line and included angles and lengths of sides. 5.2 Conducting Chain and Compass traverse surveying in a given plot of area and recording data in the field book. 5.3 Preparation of Survey map by plotting individually and to find the plotted area.	[06]	

Unit-6	<b>LEVELLING</b> 6.1 Study of Essential features and parts of different types of levels. 6.2 Study of different types of leveling staffs. 6.3 Making temporary adjustment of levels. 6.4 Determining reduced levels of five given points taking staff reading with level . 6.5 Determining the difference of level between two points the readings are filled in level books and to apply arithmetic check. 6.6 Conduct fly leveling between two distant point with respect to RL of a given bench mark by both height of collimation and rise and fall method and applying arithmetic check. 6.7 Finding RL of 1. Road, 2. Chajja with reference to given bench mark. 6.8 Conduct profile leveling along the given alignment for road/Canal for 150 meter length. 6.9 Plotting of the profile of the alignment surveyed in 6.8 and drawing the grade of alignment.	[08]	
Unit -7	<b>THEODOLITE SURVEY</b> 8.1 Study of different parts of a transit theodolite with neat sketch. 8.2 Temporary adjustment of a transit theodolite. 8.3 Measure of horizontal angle with theodolite by method of reiteration. 8.3 Measurement of vertical angles to know the height of an elevated ground.	[06]	
<b>Total</b>		<b>40</b>

**Rationale & Objective:**

Keeping in view the recent developments in science and present needs of Agriculture, the curriculum of Refrigeration & Air- Conditioning has been revised so that the Engineers or Technicians may have a better knowledge of Refrigeration & Air- Condition, especially regarding the application of the subject in various fields of Agriculture. An emphasis, in this direction, has been made in the curriculum.

The following topics are so chosen that through their contents the students become able to develop knowledge, skill and technical attitude. It will enable them to distinguish, differentiate, analyse and solve the refrigeration and air-conditioning problems.

**S.No. Topics**

**GROUP A**

**(REFRIGERATION)**

- 1 Principles of Thermodynamics
- 2 Method of Refrigeration
- 3 Air Refrigeration Systems
- 4 Simple Vapour Compression System
- 5 Refrigerants

### **Rationale:**

A diploma student of Agricultural Engineering has to install and maintain agricultural and irrigational equipment's. He is required to know about cropping patterns, prevailing in the state and country. He is also required to assess the water and fertilizer requirements, about different crop diseases, insects and pests, methods of seedbed preparation and sowing etc.

### **Objective:**

The subject has been designed to develop the skill in an Agricultural Engineering student, so that he is able to:

- identify weeds
- protect plants from insects, pests and diseases
- know about the package practices for crop plants.

Contents: Term Work		Hrs.	Marks
<b>Unit-1</b>	Study about scientific names of major crops of cereals, pulses, oil seeds, fiber crops, sugar cane, tuber and root crops, spices and condiments, forage grasses, forage legumes and plantation crops.	[02]	
<b>Unit-2</b>	Study about characteristics and suitability of various fertilizer for various crops.	[02]	
<b>Unit-3</b>	Study about methods of fertilizer application.	[02]	
<b>Unit-4</b>	Study about plant deficiencies symptoms.	[02]	
<b>Unit-5</b>	Study about schedule for seed treatment of major crops.	[02]	
<b>Unit-6</b>	Study about main diseases, its symptoms and control measures for major crops.	[02]	
<b>Unit-7</b>	Study about major pests of stored products.	[02]	
<b>Unit-8</b>	Study about main insects and its control measures for major crops.	[02]	
<b>Unit-9</b>	Study about weed control practices for important crops.	[02]	
<b>Unit-10</b>	Study about the schedule of important agro-techniques for major crops	[02]	
<b>Unit-11</b>	Study about most prominent varieties for major crops.	[02]	
<b>Unit-12</b>	Study about crop rotation for major crops.	[02]	
<b>Total</b>		<b>24</b>

<b>Unit-I</b>	<p><b>1.1</b> Crystal structures and Bonds - Unit cell and space lattice: Crystal system: The seven basic crystal systems; Crystal structure for metallic elements: BCC, FCC and HCP; Coordination number for Simple Cubic, BCC and FCC; Atomic radius: definition, atomic radius for Simple Cubic, BCC and FCC; Atomic Packing Factor for Simple Cubic, BCC, FCC and HCP; Simple problems on finding number of atoms for a unit cell.</p> <p><b>1.2</b> Bonds in solids - Classification - primary or chemical bond, secondary or molecular bond; Types of primary bonds: Ionic, Covalent and Metallic Bonds; Types of secondary bonds: Dispersion bond, Dipole bond and Hydrogen bond.</p>	<b>12</b>	
<b>Unit-II</b>	<p><b>2.1</b> Phase diagrams, Ferrous metals and its Alloys - Isomorphs, eutectic and eutectoid systems; Iron-Carbon binary diagram; Iron and Carbon Steels; flow sheet for production of iron and steel;</p> <p><b>2.2</b> Iron ores – Pig iron: classification, composition and effects of impurities on iron; Cast Iron: classification, composition, properties and uses; Wrought Iron: properties, uses/applications of wrought Iron; comparison of cast iron, wrought iron and mild steel and high carbon steel;</p> <p><b>2.3</b> standard commercial grades of steel as per BIS and AISI; Alloy Steels – purpose of alloying; effects of alloying elements – Important alloy steels: Silicon steel, High Speed Steel (HSS), heat resisting steel, spring steel,</p> <p><b>2.4</b> Stainless Steel (SS): types of SS, applications of SS – magnet steel – composition, properties and uses</p>	<b>12</b>	
<b>Unit-III</b>	<p><b>3.1</b> Non-ferrous metals and its Alloys - Properties and uses of aluminium, copper, tin, lead, zinc, magnesium and nickel; Copper alloys: Brasses, bronzes – composition, properties and uses; Aluminium alloys: Duralumin, hinalium, magnelium – composition, properties and uses; Nickel alloys: Inconel, monel, nicPerome – composition, properties and uses.</p> <p><b>3.2</b> Anti-friction/Bearing alloys: Various types of bearing bronzes - Standard</p>	<b>12</b>	

	commercial grades as per BIS/ASME.		
<b>Unit-IV</b>	<p><b>4.1</b> Failure analysis &amp; Testing of Materials - Introduction to failure analysis; Fracture: ductile fracture, brittle fracture; cleavage; notch sensitivity; fatigue; endurance limit; characteristics of fatigue fracture; variables affecting fatigue life; creep; creep curve; creep fracture;</p> <p><b>4.2</b> Destructive testing: Tensile testing; compression testing; Hardness testing: Brinell, Rockwell; bend test; torsion test; fatigue test; creep test.</p> <p><b>4.3</b> Non-destructive testing: Visual Inspection; magnetic particle inspection; liquid penetrant test; ultrasonic inspection; radiography</p>	<b>12</b>	
<b>Unit-V</b>	<p><b>5.1</b> Corrosion &amp; Surface Engineering - Nature of corrosion and its causes; Electrochemical reactions; Electrolytes; Factors affecting corrosion: Environment, Material properties and physical conditions; Types of corrosion; Corrosion control: Material selection, environment control and design;</p> <p><b>5.2</b> Surface engineering processes: Coatings and surface treatments; Cleaning and mechanical finishing of surfaces; Organic coatings; Electroplating and Special metallic plating; Electro polishing and photo-etching; Conversion coatings: Oxide, phosphate and chromate coatings; Thin film coatings: PVD and CVD;</p> <p><b>5.3</b> Surface analysis; Hard-facing, thermal spraying and high-energy processes; Process/material selection. Pollution norms for treating effluents as per standards.</p>	<b>12</b>

### Contents: Practical

#### Intellectual skill:

1. Identify concepts applied.
2. Identify parts like clutch, gear box, universal joints, propeller shaft, final drive, wheels & tyres.
3. Classify the system according to their application.
4. Detect fault by observation & trial.
5. Take reading from various instruments like chassis odyometer.

#### Motor skill:

1. Sketch the different devices.
2. Handle tools, equipment, and instrument.
3. Observe the behaviors of various systems under various parameters.

#### List of Practical/ Assignments:

1. Draw various vehicle layouts for- two wheelers, three wheeler and four wheelers and compare them.
2. Open a single plate dry clutch assembly and sketch exploded view.
3. Open a multi-plate clutch used in two wheelers, observe the operating linkages and sketch the system.
4. Open any two types of gear boxes observe gear shifting, gear ratio and sketch the system & compare them.
- 5 Open & observe automatic transmission devices such as torque converter, various drives.
- 6 Open & observe universal joints such as Hooks universal joint.
- 7 Open the differential, sketch the unit with bearing locations.
- 8 Assembly & disassembly of any one type of rear axle.
- 9 Open any two types of tyres, wheels and rims, observe and sketch.

Course Objectives:

- To calibrate the given flow measuring device.
- To apply the knowledge acquired in theory subject.
- To analyse the performance of turbines and pumps.

### Course Content:

S.No.	Topics
I	Verification of Bernoulli's theorem.
II	Determination of Coefficient of Discharge of Venturi meter.
III	Determination of Coefficient of Discharge, coefficient of contraction and coefficient of velocity of Orifice meter.
IV	Determination of coefficient of friction of flow through pipes.
V	Determination of force exerted by the jet of water on the given vane.
VI	Determination of minor losses of flow through pipes.
VII	Calibration of pressure gauge using dead weight pressure gauge tester.
VIII	Trial on centrifugal pump to determine overall efficiency.
IX	Trial on reciprocating pump to determine overall efficiency.
X	Trial on Pelton wheel to determine overall efficiency.
XI	Trial on Francis/Kaplan turbine to determine overall efficiency.

Reference Books:

N. Kumara Swamy, Fluid Mechanics and Machinery Laboratory Manual, Charotar Publishing House Pvt. Ltd., ANAND 388 001, Ed. 2008

Course outcomes:

At the end of the course, the student will be able to:

- CO1 Measure various properties such as pressure, velocity, flow rate using various instruments.
- CO2 Calculate different parameters such as co-efficient of friction, power, efficiency etc. of various systems.
- CO3 Understand the need and importance of calibration of pressure gauges.
- CO4 Describe the construction and working of turbines and pumps.
- CO5 Test the performance of turbines and pumps and Plot characteristics curves.

# WEB TECHNOLOGY LAB

<b>SUBJECT CODE: 2018308</b>	<b>Practical</b>			No. of period in one session:			Credits
	No. of Periods per Week			Full Marks:		25	<b>01</b>
			P/S	ESE		25

## Course Learning Objectives:

This Lab course is intended to practice whatever is taught in theory class of 'Web Technologies'. Some of the things that should necessary be covered in lab.

## Course outcomes:

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

	Content	Hrs.	Marks
<b><u>Unit – 1</u></b>	Home page Development static pages (using Only HTML) of an online Book store.		
<b><u>Unit – 2</u></b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.		
<b><u>Unit – 3</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.		
<b><u>Unit – 4</u></b>	Write an HTML code to display your CV on a web page.		
<b><u>Unit – 5</u></b>	Write an XML program to display products.		
<b><u>Unit – 6</u></b>	Create a web page with all types of Cascading style sheets.		
<b><u>Unit – 7</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.		
<b><u>Unit – 8</u></b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.		

This is a skill course. More student practice and try to find solution on their own, better it will be.

### **Course Objectives:**

- To understand the importance of fuel properties and learn the methods of determination of various properties of fuels.
- To understand the working principles of various methods used in determination of properties of fuels.
- To observe different parts of I.C. engine and understand their working.
- To identify the physical differences between S.I. and C.I. engines and 2-S and 4-S engines.

### **Course Content:**

S.No. Topics for practice

I Flash & Fire point tests using Able's/Cleveland/Pensky Martin Apparatus

II Viscosity measurement use/Say bolt viscometer

III Calorific value tests using Bomb Calorimeter (Solid and Liquid fuels) and Junkers Gas Calorimeter (Gaseous fuels)

IV Carbon residue test using Conradson's apparatus.

V Assembling and disassembling of I.C. Engines

VI Port timing diagram of Petrol engine

VII Port timing diagram of Diesel engine

VIII Valve timing diagram of Petrol engine

IX Valve timing diagram of Diesel engine

X Study of petrol and diesel engine components and Models

Course outcomes:

At the end of the course, the student will be able to:

- CO1 Understand the determination of flash and fire point of a given sample of fuel using given apparatus (Abels, Cleveland & Penesky martin)
- CO2 Understand the determination of Viscosity of a given sample of oil using given apparatus.
- CO3 Understand the determination of Calorific value of a given sample of fuel using given apparatus.
- CO4 Understand the determination of amount of carbon residue of a given sample of petroleum product.
- CO5 Draw VTD /PTD of given I.C. Engine and understand how the processes are controlled during its operation.
- CO6 Understand the functions of various parts of IC engines and the working of IC engines.

- How important is it really to do an internship before applying for a job?
- Do you need to get the hands-on experience that is talked about when discussing the importance of internships or is it a matter of just landing the right job?

During the Course duration year, students may feel overwhelmed with coursework, sports, or co-curricular activities that may keep them extremely busy while leaving no time to think of doing an internship or a job. Many students may also feel that they are caught in a bind since they need to make money to pay for their expenses but they can only find unpaid internships in their field.

**Getting Your Feet Wet**

Internships are a proven way to gain relevant knowledge, skills, and experience while establishing important connections in the field. Internships are also a way to get your feet wet and find out if a specific field is something you could see yourself doing full-time.

Internships may be completed during fall or spring semester or full time over the course of the summer. Unpaid internships may be easier to get but may also pose problems if making money is necessary, especially during the summer. There are many who cannot afford to work for no pay, so they are forced into doing menial jobs such as wait staff or bartending to work their way through college. It may preclude some from doing an internship which may be a detriment when hoping to get a full-time job.

**Financial Considerations**

Financial considerations when looking for an internship can make a big difference in the decision-making process. Sometimes, students will take a part-time or full-time job to supplement the time that they are spending at their internship. Whether an internship is paid or unpaid, there are many things that need to be taken into consideration to decide if an internship is worthwhile. It's important to decide if an internship will ultimately be in the best interest of the student to help meet the requirements needed when applying for a full-time job.

**How to Get Funding for an Internship**

Some colleges also offer funded internships for students. Check with your college to see if they offer a funded internship program that may help to meet the requirements of your college curriculum while offering experiences that employers seek when hiring new college graduates for entry-level jobs. Many foundations and organizations offer financing to college students so they may try writing to a number of them to see if they provide funding for college students seeking to do internships in their field.

**Having an Internship and a Job**

Students may elect to do a summer internship a couple of days per week while working a

part-time job for the remainder of the time. For those who need to maximize the amount of money they make over the course of the summer, they may look into doing an internship during the academic year when they are less likely to expect to make money to help defray their college expenses.

In addition to internships, volunteer opportunities can also be an excellent way to gain experience and exposure to the workforce. Employers love to see volunteer experiences on a student's resume. Volunteering shows commitment to causes and certain values that are intrinsic to the individuals who have participated in these types of experiences. Employers look for employees who are publicly engaged and who take an interest in community service and in doing good work.

#### What Employers Want

Internships and volunteer experiences make candidates more competitive in the job market. In addition to gaining exposure and experience in the field, they also provide an opportunity to see if the particular career field is the right one based on getting personal experience in the field. No matter what opportunities you engage in, it's important to maintain professionalism and take on the individual responsibility that is required.

#### The Benefits of Completing an internship

By doing a great job and completing more than what is required of you in your internship, you will be creating a great impression that can provide a great reference letter at the least, and may even potentially lead to a potential job offer. When you leave the organization at the end of the internship, you should ask for a recommendation letter that you can keep on file for future reference.

#### Internships Are a Learning Experience

Internships are a great way to learn the ropes so even if you find yourself filing or making coffee, as long as you're learning about the field take advantage of the opportunity and don't take the experience lightly. Asking questions is one key to learning in an internship and keeping yourself flexible throughout the internship can open many doors.

## Course Learning Objective:

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

## Objective:

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

## Rationale:

Ceramic is inorganic based Technology with a num numbs of Industrial and Domestic Products such as Refractory,Cement, Crockeries & Glass etc. The course offers the Knowledge of Ceramic Spectrums in totality.

## Learning Outcome: At the end of this course, the students will be able to:

Explain status of ceramic industries in India.

Enlist different ceramic products and their raw materials.

Explain classification of ceramic materials.

Identify physical properties of different ceramic materials.

List the different raw materials required for manufacturing of refractory, pottery, glass, enamel, cement.

## RATIONALE:

Glass is an important Ceramic Engineering subject dealing with Glass Products such as sheet glass. Bullet proof glass, tumbler glass, safety glass, optical glass, and ophthalmic glass etc. The subject imparts knowledge on its making by using different kind of furnaces. It also deals with the raw materials used in Glass Industry.

## Learning Outcome: At the end of this course, the students will be able to:

- Define glass, state properties and use of glass.
- Enlist different types of glass.
- List out different raw materials used in glass industries.
- Explain properties of different raw materials.
- Perform handling and mixing of raw materials for batch.

### RATIONALE:

Enamel is Ceramic Engineering based product which is made by fusing powdered glass to a substrate by firing. It is used as external coating as well besides its use as high temperature resistant materials in equipment. It is also used as tray or utensils because of its clean and hygienic quality.

### Learning Outcome: At the end of this course, the students will be able to:

- Define enamel and use of enamel.
- List out different raw materials used in enamel making.
- Explain properties of different raw materials for enamel.
- Prepare enamel batch, enamel slip and substrate.
- Perform application of enamel slip.

### Course Learning Objectives:

This Lab course is intended to practice what is taught in theory class of 'Computer Programming' and become proficient in computer programming. Computer programming is all about regular practice. Students should work on solved and unsolved problems listed in the text books, and the problems given by the teacher. Some of the topics that should necessary be covered in lab are listed below.

### Course outcomes:

Student should be able to write code snippets, and then compile, debug and execute them.

<b>Content: Practical</b>		<b>Hrs</b>	<b>Marks</b>
<b>Unit – 1</b>	Familiarization with programming environment (Editor, Compiler, etc.)		
<b>Unit – 2</b>	Programs using, I/O statements and various operators		
<b>Unit – 3</b>	Programs using expression evaluation and precedence		
<b>Unit – 4</b>	Programs using decision making statements and branching statements		
<b>Unit – 5</b>	Programs using loop statements		
<b>Unit – 6</b>	Programs to demonstrate applications of n dimensional arrays		
<b>Unit – 7</b>	Programs to demonstrate use of string manipulation functions		
<b>Unit – 8</b>	Programs to demonstrate parameter passing mechanism		
<b>Unit – 9</b>	Programs to demonstrate recursion		
<b>Unit – 10</b>	Programs to demonstrate use of pointers		
<b>Unit – 11</b>	Programs to demonstrate command line arguments		
<b>Unit – 12</b>	Programs to demonstrate dynamic memory allocation		
<b>Unit – 13</b>	Programs to demonstrate file operations		

The language of choice will be C. This is a skill course. More you practice, better it will be.

				<b>External</b>	<b>:</b>	<b>35</b>	

### **Rationale:**

The rationale behind this workshop is to familiarize the student with various conventional and modern processtechniques used in making various ceramic product.

### **Learning Outcome: At the end of this course, the students will be able to:**

- Apply Processing techniques used in pottery making.
- Explain Process adopted in making refractories.
- Explain Glass forming methods by using process techniques and machine.
- Perform Cement and Concrete application.
- Perform Decoration techniques with finishing.
- Prepare Mouldid

<b>Contents (Theory)</b>		<b>Hrs.</b>	<b>Mark</b>
<b>Unit -1</b>	Introduction of shaping, mounding, casting, pressing and all other processes.		
<b>Unit -2</b>	Cement and concrete application.		
<b>Unit -3</b>	Decoration and finishing of pottery and other ceramic wares techniques		
<b>Unit -4</b>	Mouldid making		
<b>Total</b>			

### **Books Recommended:**

1	The craft of Ceramic	-	Ceza de vegh and Alber Mande
2	Industrial Ceramic	-	Singer and Singer

### RATIONALE:

This Workshop is kept mainly to get students work with hand on various process involved in making glass and Enamel products. It provides practical knowledge on operations required to be carried out in industry on laboratory scale.

### Learning Outcome: At the end of this course, the students will be able to:

- Prepare the raw materials for different glass.
- Perform batching and mixing of glass batch.
- Explain Glass melting techniques and decoration.
- Prepare metal surface for enameling.
- Prepare frit batch and make enamel slip.
- Apply enamel on metal plate.

### Course Learning Objectives:

- To give a comprehensive knowledge on various aspects practiced in chemical engineering.
- To give the sources of information on related topics.

### Course Content:

<b>UNIT I</b>	Chemistry, Chemical Engineering and Chemical Technology; Chemical process industries: History and their role in Society; Role of Chemical Engineer; History and Personalities of Chemical Engineering; Greatest achievements of Chemical Engineering.
<b>UNIT II</b>	Components of Chemical Engineering: Role of Mathematics, Physics, Chemistry and Biology; Thermodynamics, Transport Phenomena, Chemical Kinetics and Process dynamics, design and control.
<b>UNIT III</b>	Concept of Unit Processes and Unit Operations; Description of different Unit Processes and Unit Operations; Designing of equipment's; Flowsheet representation of process plants,
<b>UNIT IV</b>	Role of Computer in Chemical Engineering; Chemical Engineering Software; Relation between Chemical Engineering and other engineering disciplines; Traditional vs. modern Chemical Engineering; Versatility of Chemical Engineering: Role of Chemical Engineers in the area of Food, Medical, Energy, Environmental, Biochemical, Electronics etc.
<b>UNIT V</b>	Paradigm shifts in Chemical Engineering; Range of scales in Chemical Engineering; Opportunities for Chemical Engineers; Future of Chemical Engineering.

## Course Learning Objectives:

This Lab course is intended to practice whatever is taught in theory class of ‘Web Technologies’. Some of the things that should necessary be covered in lab.

## Course outcomes:

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Home page Development static pages (using Only HTML) of an online Book store.		
<b><u>Unit – 2</u></b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.		
<b><u>Unit – 3</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.		
<b><u>Unit – 4</u></b>	Write an HTML code to display your CV on a web page.		
<b><u>Unit – 5</u></b>	Write an XML program to display products.		
<b><u>Unit – 6</u></b>	Create a web page with all types of Cascading style sheets.		
<b><u>Unit – 7</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.		
<b><u>Unit – 8</u></b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.		

This is a skill course. More student practice and try to find solution on their own, better it will be.

<b>Unit-4</b>	<p>1) Steps in Problem Solving.</p> <p>2) Identify and Clarify the Problem,</p> <p>3) Information Gathering Related to Problem,</p> <p>4) Evaluate the Evidence,</p> <p>5) Consider Alternative Solutions and their Implications.</p> <p>6) Choose and Implement the Best Alternative,</p> <p>7) Review</p> <p>8) Problem solving technique. (Any one technique may be considered)</p> <p style="padding-left: 40px;">1) Trial and error, 2) Brain storming, 3) Lateral thinking</p>
<b>Unit-5</b>	<p>Body language --</p> <p>Dress like the audience</p> <p>Posture, Gestures, Eye contact and facial expression.</p> <p>Presentation Skill –</p> <p>Stage Fright,</p> <p>Voice and language – Volume, Pitch, Inflection, Speed, Pause</p> <p>Pronunciation,</p> <p>Articulation, Language,</p> <p>Practice of speech.</p> <p>Use of aids –OHP, LCD projector, white board</p>
<b>Unit-6</b>	<p>Introduction to group discussion,</p> <p>Ways to carry out group discussion,</p> <p>Parameters— Contact, body language, analytical and logical thinking, decision making</p> <p>Interview Technique</p> <p>Necessity,</p> <p>Tips For Handling Common Questions</p>

<b>Unit-7</b>	Understand and work within the dynamics of a Groups. Tips to work effectively in terms, establish good rapport, interest with others and work effectively with them to meet common Objectives, tips provide and accept feedback in a constructive and considerate way, leadership in term, handling frustration in group.
<b>Unit-8</b>	Introduction, Task Identification, Task planning, Organizing and Execution, Closing the Task.

### Course Objective:

1. To identify different components of building.
2. To understand different types of foundation and their significance.
3. To know different types of masonry and their construction.
4. To highlight the importance of communications in building planning.
5. To learn about various construction materials.
6. To be able to identify suitability of various materials for different construction purposes.

### COURSE OUTCOMES (COs):

1. Identify relevant construction materials.
2. Identify relevant natural construction materials.
3. Select relevant special type of construction materials.
4. Identify components of building structures.
5. Propose suitable type of foundation for building structures.
6. Select suitable type of masonry for building structures.
7. Propose relevant means of communications for different types of buildings.

<b>Contents: Theory</b>		<b>Hrs</b>
<b>Unit -1</b>	<p><b>Overview of Building Components</b></p> <p>1.1 Classification of Buildings as per National Building Code Group A to I, as per Types of Constructions- Load Bearing Structure, Framed Structure, Composite Structure.</p> <p>1.2 Building Components - Functions of Building Components, Foundation, Plinth and Super structure.</p>	<b>08</b>
<b>Unit -2</b>	<p><b>Natural And Artificial Construction Materials</b></p> <p>2.1 Requirements of good building stone; general characteristics of stone; quarrying and dressing methods and tools for stone.</p> <p>2.2 Structure of timber, general properties and uses of good timber, different methods of seasoning for preservation of timber, defects in timber.</p> <p>2.3 Asphalt, bitumen and tar used in construction, properties and uses.</p> <p>2.4 Properties of sand and uses.</p> <p>2.5 Classification of coarse aggregate according to size.</p> <p>2.6 Constituents of brick earth, Conventional / Traditional bricks, Modular and Standard bricks, Special bricks –fly ash bricks,</p> <p>2.7 Characteristics of good brick</p>	<b>12</b>

Unit – 3	<b>Special and Processed Construction Materials</b> 3.1 Types of material and suitability in construction works of following materials: Water proofing, Termite proofing; Thermal and sound insulating materials. 3.2 Paints- whitewash, cement paint, Distempers, Oil Paints and Varnishes.	04
Unit – 4	<b>Construction of Substructure and Superstructure</b> <b>4.1</b> Job Layout: Site Clearance, Layout for Load Bearing Structure and Framed Structure by Center Line and Face Line Method, Precautions. <b>4.2.</b> Foundation: Functions of foundation, Types of foundation – Shallow Foundation, Stepped Footing, Wall Footing, Column Footing, Isolated and Combined Column Footing, Raft Foundation. <b>4.3. Stone Masonry:</b> Terms used in stone masonry- facing, backing, hearting, through stone, corner stone, cornice. Types of stone masonry: Rubble masonry, Ashlar Masonry and their types. <b>4.4. Brick masonry:</b> Terms used in brick masonry, header, stretcher, closer, quoins, course, face, back, hearting, bat bond, joints, lap, frog. Bonds in brick masonry- header bond, stretcher bond, English bond and Flemish bond. <b>4.5. Scaffolding and Shoring:</b> Purpose, Types of Scaffolding, Process of Erection and Dismantling. Purpose and Types of Shoring, Underpinning.	10
Unit-5	<b>5.1 Building Communication and Ventilation</b> Doors –Components of Doors, Full Paneled Doors, Partly Paneled and Glazed Doors, Flush Doors, Collapsible Doors, Rolling Shutters, Revolving Doors, Glazed Doors. Sizes of Door recommended by BIS. <b>5.2 Windows:</b> Component of windows, Types of Windows - Full Paneled, Partly Paneled and Glazed, wooden, Steel, Aluminum windows, Sliding Windows, Louvered Window, Bay window, Sizes of Windows recommended by BIS. Ventilators. <b>5.3 Vertical Communication:</b> Means of Vertical Communication- Stair Case, Ramps, Lift, Elevators and Escalators. Terms used in staircase-steps, tread, riser, nosing, soffit, waist slab, balustrade, scotia, hand rails, newel post, landing, headroom, winder. Types of staircases (On the basis of shape): Straight, dog-legged, open well, Spiral, quarter turn, bifurcated, three quarter turn and Half turn, <b>5.4 Wall Finishes:</b> Plastering – Necessity of Plastering, Procedure of Plastering, Single Coat Plaster, Double Coat Plaster, Rough finish. Precautions to be taken in plastering, defects in plastering. Pointing – Necessity, Types of pointing and procedure of Pointing, Painting.	14

**Course Objective:**

1. To understand types of surveying works required.
2. To know the types of method and equipment's to be used for different surveys.
3. To know the use and operational details of various surveying equipment's.

**COURSE OUTCOMES (COs):**

1. Select the type of survey required for given situation.
2. Compute area of open field using chain, tape and cross staff.
3. Conduct traversing in the field using chain and compass.
4. Use levelling instruments to determine reduced level for preparation of contour maps
5. Use digital planimeter to calculate the areas

**Course Objective:**

1. To learn properties of area and structural material properties.
2. To understand the concept of stress and strain.
3. To calculate shear force, bending moment for different shapes of structural elements and corresponding stresses.
4. To understand the concept of buckling loads for short and long columns.

**COURSE OUTCOMES (COs):**

1. Articulate practical applications of moment of inertia of symmetrical and unsymmetrical structural sections.
2. Analyze structural behavior of materials under various loading conditions.
3. Interpret shear force and bending moment diagrams for various types of beams and loading conditions.
4. Determine the bending and shear stresses in beams under different loading conditions.
5. Analyze the column for various loading and end conditions.

**COURSE OUTCOMES (COs):**

1. Use different types of cement and aggregates in concrete
2. Prepare concrete of desired compressive strength.
3. Prepare concrete of required specification.
4. Maintain quality of concrete under different conditions.
5. Apply relevant admixtures for concreting

CONTENTS: THEORY		Hrs
Unit -1	<p><b>Cement</b></p> <p>1.1 Physical Properties of OPC- fineness, standard consistency, setting time, compressive strength &amp; soundness.</p> <p>1.2 Testing of cement - fineness test, consistency test, setting time test, compressive strength test &amp; soundness test, Storage of Cement and its effects on the properties of cement.</p> <p>1.3 Types of Cements and their properties as per IS Specifications and their field applications- Ordinary Portland Cement (33, 43 and 53 grades), Portland Pozzolana Cement, Rapid Hardening Cement, Low Heat Cement, High Alumina Cement, Sulphate Resisting Cement, White Cement.</p>	06
Unit -2	<p><b>Aggregates</b></p> <p>2.1 Aggregates: Source, Requirements of good aggregate, Classification according to size and shape.</p> <p>2.2 Fine aggregates: Properties, size, specific gravity, bulk density, water absorption and bulking, fineness modulus and grading zone of sand,</p> <p>2.3 Coarse aggregates: Properties, size, shape, surface texture, water absorption, soundness, specific gravity and bulk density, fineness modulus of coarse aggregate, grading of coarse aggregates, crushing value, impact value and abrasion value of coarse aggregates with specifications.</p>	08

Unit – 3	<p><b>Concrete</b></p> <p>3.1 Definition of concrete, different grades of concrete (ordinary concrete, standard concrete &amp; high strength concrete as per provisions of IS 456- 2000), minimum grade of concrete for different exposure conditions, minimum grade of concrete for R.C.C., water retaining structure &amp; in sea water construction, durability of concrete.</p> <p>3.2 Water Cement ratio, Duff Abraham water cement (w/c) ratio law, significance of w/c ratio, selection of w/c ratio for different grades, maximum w/c ratio for different grades of concrete for different exposure conditions as per IS 456.</p> <p>3.3 Properties of fresh concrete: - Workability, Factors affecting workability of concrete, Determination of workability of concrete by slump cone, compaction factor, Vee-Bee Consistometer. Value of workability requirement for different types of concrete works. Segregation, bleeding and preventive measures.</p> <p>3.4 Properties of hardened concrete: - Compressive strength, durability, impermeability.</p>	10
Unit – 4	<p><b>Concrete mix design and testing of Concrete</b></p> <p>4.1 Concrete mix design, objectives, methods of mix design, study of mix design procedure by IS method as per IS 10262, (only procedural steps).</p> <p>4.2 Testing of hardened concrete: Significance of testing, determination of compressive strength of concrete cubes at different ages, interpretation &amp; co relation of test results.</p> <p>4.3 Non- Destructive Tests of concrete: Importance of NDT, Methods of NDT - Rebound hammer test, Ultrasonic pulse velocity test, working principle of rebound hammer and factor affecting the rebound index.</p>	10
Unit-5	<p><b>Quality control of concrete</b></p> <p>5.1 Concreting Operations: Batching, Mixing, Transportation, Placing, Compaction, Curing and finishing of concrete.</p> <p>5.2 Forms for concreting: Different types of form works for beams, slabs, columns, materials used for form work, requirement of good form work. Stripping time for removal of form works per IS 456</p> <p>5.3 Waterproofing: Importance and need of waterproofing, methods of waterproofing and materials used for waterproofing.</p> <p>5.4 Joints in concrete construction: Types of joints, methods for joining old and new concrete, materials used for filling joints.</p>	06

### Course Objective:

1. To Understand and determine physical and index properties of soil.
2. To estimate permeability and shear strain of soil.

### COURSE OUTCOMES (COs):

1. Analyze and classify soils.
2. Identify shear strength parameters for field conditions.
3. Understand the principles of compaction and its control.
4. Understand various stresses and their distribution in soil and other engineering properties of soil.

CONTENTS: THEORY		Hrs.
Unit -1	<p><b>Overview of Geotechnical Engineering</b></p> <p>1.1 Definition of soil.</p> <p>1.2 Importance of soil in Civil Engineering as construction material.</p> <p>1.3 Field application of geotechnical engineering for foundation design, pavement design, design of earth retaining structures, design of earthen dams (brief ideas only).</p>	04
Unit -2	<p><b>Physical and Index Properties of Soil</b></p> <p>2.1 Soil as a three phase system.</p> <p>2.2 Water content, Determination of water content by oven drying method as per IS code.</p> <p>2.3 Void ratio, porosity ,degree of saturation and density index.</p> <p>2.4 Unit weight of soil mass – bulk unit weight, dry unit weight, unit weight of soil solids, saturated unit weight, submerged unit weight.</p> <p>2.5 Determination of bulk unit weight and dry unit weight by core cutter method and sand replacement method as per IS code.</p> <p>2.6 Specific gravity, determination of specific gravity by pycnometer.</p> <p>2.7 Consistency of soil, Atterberg's limits of consistency: Liquid limit, plastic limit and shrinkage limit, plasticity index.</p> <p>2.8 Determination of liquid limit, plastic limit and shrinkage limit as per IS code.</p> <p>2.9 Particle size distribution, mechanical sieve analysis as per IS code, particle size distribution curve, effective diameter of soil, Uniformity coefficient and coefficient of curvature, well graded and uniformly graded soils.</p>	10

Unit – 3	<p><b>Permeability of Soil</b></p> <p>3.1 Definition of permeability</p> <p>3.2 Darcy’s law of permeability, coefficient of permeability, typical values of coefficient of permeability for different soil.</p> <p>3.3 Factors affecting permeability</p> <p>3.4 Determination of coefficient of permeability by constant head and falling head permeability tests, simple problems to determine coefficient of permeability.</p> <p>3.5 Seepage through earthen structures, seepage velocity, seepage pressure, phreatic line, flow lines and equipotential lines.</p> <p>3.6 Flow net, characteristics of flow net, application of flow net (no numerical problems).</p>	10
Unit – 4	<p><b>Shear strength of Soil</b></p> <p>4.1 Shear failure of soil, field situation of shear failure</p> <p>4.2 Concept of shear strength of soil.</p> <p>4.3 Components of shearing resistance of soil– cohesion, internal friction.</p> <p>4.4 Mohr-coulomb failure theory, Strength envelope, strength equation for purely cohesive and cohesion less soils.</p> <p>4.5 Laboratory determination of shear strength of soil – Direct shear test, Unconfined compression test &amp; vane shear test, plotting strength envelope, determining shear strength parameters of soil.</p>	10
Unit – 5	<p><b>Bearing capacity of Soil</b></p> <p>5.1 Concept of bearing capacity, ultimate bearing capacity, safe bearing capacity and allowable bearing pressure.</p> <p>5.2 Terzaghi’s analysis and assumptions .</p> <p>5.3 Effect of water table on bearing capacity.</p> <p>5.4 Field methods for determination of bearing capacity – Plate load test and standard penetration test. Test procedures as Per IS:1888 &amp; IS:2131.</p> <p>5.5 Definition of active earth pressure and passive earth pressure, structures subjected to earth pressure in the field.</p>	06
Unit – 6	<p><b>Compaction and stabilization of soil</b></p> <p>6.1 Concept of compaction, purpose of compaction, field situations where compaction is required.</p> <p>6.2 Standard proctor test – test procedure as per IS code, Compaction curve, optimum moisture content, maximum dry density, Zero air voids line.</p> <p>6.3 Modified proctor test.</p> <p>6.4 Factors affecting compaction.</p> <p>6.5 Field methods of compaction – rolling, ramming &amp; vibration.</p> <p>6.6 California bearing ratio, CBR test, significance of CBR value.</p> <p>6.7 Concept of soil stabilization, necessity of soil stabilization.</p>	08

	6.8 Different methods of soil stabilization – Mechanical soil stabilization, lime stabilization, cement stabilization, bitumen stabilization, fly-ash stabilization.

	—	—	—	<b>External</b>	<b>:</b>	<b>35</b>	

## **Course Objective:**

1. To understand types of surveying works required.
2. To know the type of method and equipment to be used for different surveys.
3. To know the use and operational details of various surveying equipment.

## **Practical Outcomes:**

1. Select the type of survey required for given situation.
2. Compute area of open field using chain, tape and cross staff.
3. Conduct traversing in the field using chain and compass.
4. Use levelling instruments to determine reduced level to prepare contour maps.
5. Use digital planimeter to calculate the areas.

## **CONTENTS: PRACTICAL**

### **Preform any eight Experiments**

1. Measure distance between two survey stations using chain, tape and ranging rods when two stations are inter visible.
2. Perform reciprocal ranging and measure the distance between two stations.
3. Determine area of open field using chain and cross staff survey.
4. Measure Fore Bearing and Back Bearing of survey lines of open traverse using Prismatic Compass.
5. Measure Fore Bearing and Back Bearing of a closed traverse of 5 or 6 sides and correct the bearings and included angles for the local attraction.
6. Undertake Survey Project with chain and compass for closed traverse for minimum 5 sides around a building.
7. Plot the traverse on A1 size imperial drawing sheet for data collected in Survey Project mentioned at practical **No.6.**
8. Undertake simple levelling using dumpy level/ Auto level and levelling staff.
9. Undertake differential levelling and determine Reduced Levels by Height of instrument method and Rise and fall method using dumpy level/Auto Level and levelling staff.
10. Undertake fly levelling with double check using dumpy level/ Auto level and levelling staff.

11. Undertake Survey Project for plotting contour map using block contouring method for a block of 150m x 150m with grid of 10m x10m.
12. Measure area of irregular figure using Digital planimeter

## **Course Objective:**

1. To learn about various construction materials and understand their relevant characteristics.
2. To be able to identify suitability of various materials for different construction purposes.
3. To know about natural, artificial, and processed materials available for various purposes of construction activities.

## **Practical Outcomes:**

1. Identify relevant construction materials.
2. Identify relevant natural construction materials.
3. Select relevant artificial construction materials.

## **CONTENTS: PRACTICAL**

### **Perform any eight experiments:**

1. Identify various sizes of available coarse aggregates from sample of 10 kg in laboratory and prepare report.
2. Prepare the lime putty by mixing lime (1 kg) with water in appropriate proportion and prepare report on slaking of lime.
3. Select first class, second class and third-class bricks from the stake of bricks and prepare report on the basis of its properties
4. Measure dimensions of 10 bricks and find average dimension and weight. Perform field tests- dropping, striking and scratching by nail and correlate the results obtained.
5. Identify different types of flooring tiles such as vitrified tiles, ceramic tiles, glazed tiles, mosaic tiles, anti- skid tiles and prepare report about the specifications.
6. Identify the type of glasses from the given samples.
7. Prepare the cement mortar of proportion 1:3 or 1:6 using cement and sand.
8. Preparing foundation plan and marking on ground layout of load bearing structure by face line method from the given plan of the building
9. Preparing foundation plan and marking on ground layout of framed structure by face line method from the given Plan of the building
10. Observing and writing report of the process of plastering.

## **Course Learning Objectives:**

This Lab course is intended to practice whatever is taught in theory class of ‘Web Technologies’. Some of the things that should necessary be covered in lab.

## **Course outcomes:**

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b>Unit – 1</b>	Home page Development static pages (using Only HTML) of an online Book store.	04	
<b>Unit – 2</b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.	06	
<b>Unit – 3</b>	Write a PHP program to display a digital clock which displays the current time of the server.	06	
<b>Unit – 4</b>	Write an HTML code to display your CV on a web page.	04	
<b>Unit – 5</b>	Write an XML program to display products.	05	
<b>Unit – 6</b>	Create a web page with all types of Cascading style sheets.	06	
<b>Unit – 7</b>	Write a PHP program to display a digital clock which displays the current time of the server.	05	
<b>Unit – 8</b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.	04	

This is a skill course. More student practice and try to find solution on their own, better it will be.

### **Course Objective:**

1. To know the procedure for the conduct of tensile and compressive strength.
2. To understand the concept of stress and strain through testing of different materials.
3. To calculate shear force, bending moment and their corresponding stresses.
4. To understand flexural strength of floor tiles.

### **Term Work Outcomes:**

1. Test different Civil engineering materials on Universal Testing Machine.
2. Analyze structural behavior of materials under various loading conditions.
3. Interpret shear force and bending moment diagrams for various types of beam sections and different loading conditions.
4. Determine bending and shear stresses in beams under different loading conditions.
5. Calculate flexural strength of different types of floor tiles

### **CONTENTS: -TERM WORK**

### **Preform any eight Experiments**

1. Study different components of Universal Testing Machine (UTM).
2. Perform Tension test on mild steel as per IS:432(1).
3. Perform tension test on Tor steel as per IS:1608, IS:1139.
4. Conduct compression test on sample test piece using Compression Testing Machine.
5. Conduct Izod Impact test on three metals. e.g., mild steel/ brass/aluminum/ copper /cast iron as per IS:1598.
6. Conduct Charpy Impact test on three metals. e.g., mild steel/ brass/aluminum/ copper /cast iron as per IS:1757.
7. Determine Water Absorption on bricks as per IS:1077
8. Determine Compressive strength of dry and wet bricks as per IS:3495(part I), IS:1077
9. Conduct Abrasion Test on flooring tiles (any one) e.g., Mosaic tiles, Ceramic Tiles Cement Tile.
10. Perform Single Shear and double shear test on any two metals e.g., Mild steel/ brass/aluminum/copper / cast iron as per IS:5242.
11. Plot Shear force and Bending Moment diagrams for cantilever, simply supported beams for different types of loads.
12. Plot Shear force and Bending Moment diagrams for overhanging beams for different types of loads including moment loading.
13. Conduct Flexural test on timber beam on rectangular section in both orientations as per IS:1708, IS:2408.
14. Conduct Flexure test on floor tiles IS:1237 or roofing tiles as per IS:654.

## **Course Objective:**

1. To know properties of cement and aggregate used in concrete.
2. To understand different characteristics of concrete.
3. To learn about preparation of Concrete.

## **Term Work Outcomes:**

1. Identify different types of cement by performing laboratory tests.
2. Know the physical properties of fine and coarse aggregates.
3. Prepare concrete of required grade.

## Contents: - Term Work

### **Preform any eight Experiments**

1. Determine fineness of cement by Blaine's air permeability apparatus or by sieving.
  2. Determine specific gravity, standard consistency, initial and final setting times of cement.
  3. Determine compressive strength of cement.
  4. Determine silt content in sand.
  5. Determine bulking of sand.
  6. Determine bulk density of fine and coarse aggregates.
  7. Determine water absorption of fine and coarse aggregates.
  8. Determine Fineness modulus of fine aggregate by sieve analysis.
  9. Determine impact value of aggregate.
  10. Determine crushing value of aggregate.
  11. Determine abrasion value of aggregate.
  12. Determine elongation and flakiness index of coarse aggregates.
  13. Determine workability of concrete by slump cone test.
  14. Determine workability of concrete by compaction factor test.
  15. To prepare concrete mix of a particular grade and determine compressive strength of concrete for 7 and 28 days.
  16. Demonstration of NDT equipment.

## Course Learning Objective:

The main objectives of the course are to:

- Introduce concepts of mathematical logic for analysing propositions and proving theorems.
- Use sets for solving applied problems, and use the properties of set operations algebraically.
- Work with relations and investigate their properties.
- Investigate functions as relations and their properties.
- Introduce basic concepts of graphs, digraphs and trees.

## Learning Outcomes:

After completion of the course students are expected to be able to:

- Analyse logical propositions via truth tables.
- Prove mathematical theorems using mathematical induction.
- Understand sets and perform operations and algebra on sets.
- Determine properties of relations, identify equivalence and partial order relations, sketch relations.
- Identify functions and determine their properties.
- Define graphs, digraphs and trees, and identify their main properties.
- Evaluate combinations and permutations on sets.

## Course Learning Objective:

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

## Objective:

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

## Course Learning Objective:

This course will enable the students to grasp the working of basic components of computer system. Further the course will help them to learn as to how the basic components interact with each other to form a working system.

## Objective:

Objective of the course is to familiarize students about hardware and software design including logic design, and basic structure and behavior of the various functional modules of the computers and how they interact to provide the processing needs of the user.

This subject mainly focuses on the hardware and system software. It aims to describe the following aspects:

1. Building blocks of the computer.
2. Computer Design.
3. Assembly Language Programming.

## Course Learning Objective:

The subject will help the students to learn facts, concepts, principle and procedure of digital electronics. These techniques can be used for designing sequential and combinational circuits which forms the basis of any electronic device. Also, this subject is designed to give clear idea about working principles of 8085 microprocessor.

## Objective:

The objective of this subject is to enable the students to know basic concepts of digital electronics and familiarity with available chips. After undergoing this course, the students will have the awareness of various arithmetic circuits, counter design, registers, A/D and D/A converters, semi-conductor memories, multiplexers and de-multiplexers etc.

## **Course Learning Objective**

Internet is the easiest and fastest way of communication. The use of Internet can be easily seen in our day-to-day life, be it sending a mail or looking for some information, its importance can't be overruled. This subject exposes the diploma students to basic networking technology and the Internet technology. IT will teach the students, the Internet technology and different features available on the Internet.

## Course Learning Objectives:

This Lab course is intended to practice what is taught in theory class of 'Computer Programming' and become proficient in computer programming. Computer programming is all about regular practice. Students should work on solved and unsolved problems listed in the text books, and the problems given by the teacher. Some of the topics that should necessary be covered in lab are listed below.

## Course outcomes:

Student should be able to write code snippets, and then compile, debug and execute them.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b>Unit – 1</b>	Familiarization with programming environment (Editor, Compiler, etc.)	04	
<b>Unit – 2</b>	Programs using, I/O statements and various operators	04	
<b>Unit – 3</b>	Programs using expression evaluation and precedence	04	
<b>Unit – 4</b>	Programs using decision making statements and branching statements	04	
<b>Unit – 5</b>	Programs using loop statements	04	
<b>Unit – 6</b>	Programs to demonstrate applications of n dimensional arrays	04	
<b>Unit – 7</b>	Programs to demonstrate use of string manipulation functions	04	
<b>Unit – 8</b>	Programs to demonstrate parameter passing mechanism	04	
<b>Unit – 9</b>	Programs to demonstrate recursion	04	
<b>Unit – 10</b>	Programs to demonstrate use of pointers	04	
<b>Unit – 11</b>	Programs to demonstrate command line arguments	03	
<b>Unit – 12</b>	Programs to demonstrate dynamic memory allocation	03	
<b>Unit – 13</b>	Programs to demonstrate file operations	04	

The language of choice will be C. This is a skill course. More you practice, better it will be.

### Course Learning Objectives:

This Lab course is intended to practice whatever is taught in theory class of 'Web Technologies'. Some of the things that should necessary be covered in lab.

### Course outcomes:

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

<b>Content - Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b>Unit – 1</b>	Home page Development static pages (using Only HTML) of an online Book store.	04	
<b>Unit – 2</b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.	06	
<b>Unit – 3</b>	Write a PHP program to display a digital clock which displays the current time of the server.	06	
<b>Unit – 4</b>	Write an HTML code to display your CV on a web page.	04	
<b>Unit – 5</b>	Write an XML program to display products.	05	
<b>Unit – 6</b>	Create a web page with all types of Cascading style sheets.	06	
<b>Unit – 7</b>	Write a PHP program to display a digital clock which displays the current time of the server.	05	
<b>Unit – 8</b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.	04	

This is a skill course. More student practice and try to find solution on their own, better it will be.

## Course Objective:

1. Understanding the behaviour of Logic Gates, Adders, Decoders, Multiplexers and Flip-Flops.
2. Understanding the behaviour of ALU, RAM, STACK and PROCESSOR from working modules and the modules designed by the student as part of the experiment.

## **Practical Outcomes: After completing the course, the students will understand**

- (1) Analyse the behaviour of logic gates
- (2) Design combinational circuits for basic components of computer system and applications.
- (3) Analyse the operational behaviour and applications of various flip-flop.
- (4) Design Arithmetic logic units and different types of memory blocks.

<b>Contents: Term Work</b>		<b>Hrs.</b>	<b>Marks</b>
<b>Unit -1</b>	Introduction to Verilog HDL/VHDL	[3]	
<b>Unit -2</b>	Verify the behaviour of logic gates using truth tables (AND, OR, NOT, XOR, NAND, NOR)	[5]	
<b>Unit -3</b>	Implementing HALF ADDER, FULL ADDER using basic logic gates	[6]	
<b>Unit -4</b>	Implementing Binary -to -Gray, Gray -to -Binary code conversions	[5]	
<b>Unit -5</b>	Implementing 3-8line DECODER	[5]	
<b>Unit -6</b>	Implementing 4x1 and 8x1 MULTIPLEXERS.	[6]	
<b>Unit -7</b>	Verify the excitation tables of various FLIP-FLOPS	[8]	
<b>Unit -8</b>	Design of an 8-bit Input/Output system with four 8-bit Internal Registers.	[6]	
<b>Unit -9</b>	Design of an 8-bit ARITHMETIC LOGIC UNIT. Design of 24x8 (16 byte) RAM. Design of 24x8 (16 byte) STACK. Implementation of a 4-bit PROCESSOR.	[6]

<b>CONTENTS</b>		Hrs.	Marks
<b>UNIT – 01</b>	Write a program to demonstrate basic data type in python.		
<b>UNIT – 02</b>	Write a program to compute distance between two points taking input from the user (Pythagorean Theorem)		
<b>UNIT – 03</b>	Write a python program Using for loop, write a program that prints out the decimal equivalent of $1 + \frac{1}{2} + \frac{1}{3} \dots \frac{1}{n}$		
<b>UNIT – 04</b>	Write a Python program to find first n prime numbers. Write a program to demonstrate list and tuple in python.		
<b>UNIT – 05</b>	Write a program using a for loop that loops over a sequence. Write a program using a while loop that asks the user for a number and prints a countdown from that number to zero.		
<b>UNIT – 06</b>	Write a Python Program to add matrices. Write a Python program to multiply matrices.		
<b>UNIT – 07</b>	Write a Python program to check if a string is palindrome or not.		
<b>UNIT – 08</b>	Write a Python program to Extract Unique values dictionary values		
<b>UNIT – 09</b>	Write a Python program to read file word by word Write a Python program to Get number of characters, words.		
<b>UNIT – 10</b>	Write a Python program for Linear Search

**Course Objectives:**

The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences:

- An understanding of basic abstractions of electrical power generations from conventional and nonconventional sources of energy.
- The capability to use abstractions to comprehend and analyze the impact of various system on environments and economics aspects of energy generation.
- Maintain the efficient operation of various electric power generating plants.
- The capability to incorporate the knowledge of electrical power generation in other field of science, engineering and economics.

<b>Name of the Topic</b>		<b>Hrs./Unit</b>
Unit - I	<p><b>Thermal Power Plants: Coal, Gas/ Diesel and Nuclear-based</b></p> <p>Lay out and working of a typical thermal power plant with steam turbines and electric generators.</p> <p>Properties of conventional fuels used in the energy conversion equipment used in thermal powerplants: Coal, Gas/diesel. Nuclear fuels–fusion and fission action safe practices and working of various thermal power plants: coal-based, gas-based, diesel-based, and nuclear-based. Functions of the following types of thermal power plants and their major auxiliaries:</p> <p>Coal fired boilers: fire tube and water tube.</p> <p>Gas / diesel base combustion engines Types of nuclear reactors: Disposal of nuclear waste and nuclear shielding. Thermal power plants in Bihar.</p>	10
Unit - II	<p><b>Large and Micro-Hydro Power Plants</b></p> <p>Energy conversion process of hydro power plant.</p> <p>Classification of hydro power plant: High, medium and low head.</p> <p>Construction and working of hydro turbines used in different types of hydro power plant: High head – Pelton turbine, medium head – Francis turbine, Low head – Kaplan turbine.</p> <p>Safe Practices for hydro power plants.</p> <p>Different types of micro-hydro turbines for different heads Pelton Francis and Kaplan turbines</p> <p>Locations of these different types of large and micro-hydro power plants in Bihar</p> <p>Potential locations of micro-hydro power plants in Bihar</p>	8
Unit - III	<p><b>Solar and Biomass based Power Plants</b></p> <p>Solar Map of India: Global solar power radiation.</p> <p>Solar Power Technology</p> <p>a. Concentrated Solar Power (CSP) plants, construction and working of Power Tower, Parabolic Trough, Parabolic Dish, Fresnel Reflectors</p> <p>b. Solar Photovoltaic (PV) power plant: layout, construction, working.</p> <p>C. Biomass-based Power Plants. Layout of a Bio-chemical based (e.g. biogas) power plant:</p> <p>a. Layout of a Thermo-chemical based (e.g. Municipal waste) power plant</p> <p>b. Layout of an Agrochemical based (e.g. bio-diesel) power plant</p> <p>Features of the solid, liquid and gas biomasses as fuel for biomass power plant.</p>	10

Unit - IV	<b>Wind Power Plants</b> Wind Map of India: Wind power density in watts per square meter, Lift and drag principle; long path theory. Layout of Horizontal axis large wind power plant: Geared wind power plant. Direct-drive wind power plant. Salient Features of electric generators used in large wind power plants: Constant Speed Electric Generators: Squirrel Cage Induction Generators (SCIG), Wound Rotor Induction Generator (WRIG) Variable Speed Electric Generators: Doubly-fed induction generator (DFIG)wound rotor synchronous generator (WRSG), permanent magnet synchronous generator (PMSG)	8
Unit - V	<b>Small Wind Turbines</b> Horizontal axis small wind turbine: direct drive type, components and working Horizontal axis small wind turbine: geared type, components and working Vertical axis small wind turbine: direct drive and geared, components and working Type of towers and installation of small wind turbines on roof tops and open fields. Electric generators used in small wind power plants	4
Unit - VI	<b>Economics of Power Generation and Interconnected Power System</b> Related terms: connected load, firm power, cold reserve, hot reserve, spinning reserve. Base load and peak load plants; Load curve, load duration curve, integrated duration curve, Cost of generation: Average demand, maximum demand, demand factor, plant capacity factor, plant use factor, diversity factor, load factor and plant load factor. Choice of size and number of generator units, combined operation of power station. Causes and Impact and reasons of Grid system fault: State grid, national grid, brownout and black out; sample blackouts at national and international level	8

**Course Objectives:**

The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences:

- Maintain the efficient operation of various electric power generating plants.
- The capability to incorporate the knowledge of electrical power generation in other field of science, engineering and economics.

**Practical's:**

1. Identify the routine maintenance part of the coal fired thermal power plant and gas fired thermal power plant after watching a video programme.
2. Assemble and dismantle a small diesel generator power plant.
3. Identify the routine maintenance part soft he nuclear fired thermal power plant after watching a video programme.
4. Identify the routine maintenance part soft he large hydro power plant after watching a video programme
5. Identify the routine maintenance parts of the micro hydro power plant after watching a video programme.
6. Assemble a micro hydro power plant and then dismantle it.
7. Assemble and dismantle of the parabolic trough or parabolic dish Concentrated Solar Power (CSP)plant.
8. Assemble the solar PV plant to produce electric power and then dismantle it.
9. Assemble and dismantle a small biogas plant to generate electric power
10. Identify the routine maintenance parts of the large wind power plant after watching a video programme.
11. Assemble a horizontal axis small wind turbine to produce electric power
12. Dismantle a horizontal axis small wind turbine.
13. Assemble a vertical axis small wind turbine o produce electric power and then dismantle it.
14. Identify the routine maintenance part soft he horizontal axis small wind turbine after watching a video programme.
15. Identify the routine maintenance parts of the vertical axis small wind turbine after watching a video programme.

**Course Outcomes:**

The theory, practical experiences and relevant soft skills associated with this course are to be taught and implemented, so that the student demonstrates the following industry-oriented Cos associated with the above-mentioned competency:

- a) Maintain the optimized working of the thermal power plant.
- b) Maintain the optimized working of large and micro hydro power plants.
- c) Maintain the optimized working of solar and biomass-based power plants.
- d) Maintain the optimized working of wind power plants.

**CONTENTS: PRACTICAL**

**Course objectives:**

The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences:

- Maintain electrical systems by applying AC and DC circuit fundamentals. Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.
- Provide working knowledge for the analysis of basic DC and AC circuits used in electrical and electronic devices.

**practical's**

1. Use dual trace oscilloscope to determine A.C voltage and current response in given R L,C circuit.
2. Use voltmeter, ammeter, wattmeter to determine active, reactive and apparent power consumed in given R-L series circuit. Draw phase or diagram.
3. Use voltmeter, ammeter to determine active, reactive and apparent power consumed in given R-C series circuit. Draw phasor diagram.
4. Use voltmeter, ammeter, wattmeter to determine active, reactive and apparent power consumed in given R-L-C series circuit. Draw phase or diagram.
5. Use variable frequency supply to creature sonance in given series R-L-C circuit or by using variable inductor or variable capacitor.
6. Use voltmeter, ammeter, and wattmeter to determine current, power factor active, reactive and apparent power in R-C parallel A.C. circuit.
7. Use voltmeter, ammeter, wattmeter, power factor meter to determine current, p.f., active, reactive and apparent power for given R-L-C parallel circuit with series connection of resistor and inductor in parallel with capacitor.
8. Use variable frequency supply create resonance in given parallel R-L-C circuit or by using variable inductor or capacitor.
9. Use voltmeter, ammeter, wattmeter, pf meter to determine line and phase quantities of voltage and current for balanced three phases tar and delta connected load and calculate active, reactive, and apparent power. Draw phasor diagram.
10. Use voltmeter, ammeter, watt meter, pf meter to determine line and phase quantities of voltage and current for unbalanced three phases tar and delta connected load and calculate active, reactive, and apparent power. Draw phase or diagram.
11. Use voltmeter, ammeter to determine current through the given branch of electric network by applying mesh analysis.
12. Use voltmeter, ammeter to determine current through the given branch of electric network by applying node analysis.
13. Use voltmeter, ammeter to determine current through the given branch and voltage across the given element of circuit by applying superposition theorem.
14. Use voltmeter, ammeter to determine equivalent circuit parameter in a given circuit by applying Thevenin's theorem

15. Use voltmeter, ammeter to determine equivalent circuit parameter in a given circuit by applying Norton's theorem
16. Use voltmeter, ammeter to determine load resistance for maximum power transfer for a given circuit by applying maximum power transfer theorem.

**Course outcomes:**

The theory, practical experiences and relevant soft skills associated with this course are to be taught and implemented, so that the student demonstrates the following industry-oriented project associated with the above-mentioned competency:

- Trouble shoot problems related to single phase A.C series circuits.
- Trouble shoot problems related to single phase A.C parallel circuits.
- Troubleshoot problems related to three phase circuits.
- Use principles of circuit analysis to trouble shoot electric circuits.
- Apply network theorems to troubleshoot electric circuits.

## Course Learning Objectives:

This Lab course is intended to practice whatever is taught in theory class of 'Web Technologies'. Some of the things that should necessary be covered in lab.

## Course outcomes:

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Home page Development static pages (using Only HTML) of an online Book store.	04	
<b><u>Unit – 2</u></b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.	06	
<b><u>Unit – 3</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	06	
<b><u>Unit – 4</u></b>	Write an HTML code to display your CV on a web page.	04	
<b><u>Unit – 5</u></b>	Write an XML program to display products.	05	
<b><u>Unit – 6</u></b>	Create a web page with all types of Cascading style sheets.	06	
<b><u>Unit – 7</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	05	
<b><u>Unit – 8</u></b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.	04	

This is a skill course. More student practice and try to find solution on their own, better it will be.

**CONTENTS: PRACTICAL**

**Course objectives:**

The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences:

- Use relevant measuring instrument in different electrical applications.
- Identify the various parameters that are measurable in electronic instrumentation.
- Employ appropriate instruments to measure given sets of parameters.
- Practice the construction of testing and measuring set up for electronic systems.
- To have a deep understanding about instrumentation concepts which can be applied to Control systems.

**Practical's:**

1. Identify measuring instruments on the basis of symbol on dial, type, accuracy, class position and scale.
2. Identify the components of PMMC and MI instruments.
3. Troubleshoot PMMC and MI instruments.
4. Measure AC and DC quantities in a working circuit.
5. Extend range of ammeter and volt meter by using (i) shunt and multiplier (ii) CT and PT.
6. Use Clamp-on meter for measurement of AC/DC current, AC/DC voltage.
7. Use electro-dynamic watt-meter for measurement of power in a single-phase circuit
8. Troubleshoot electro dynamic watt-meter for measurement of power in a single-phase circuit
9. Use single watt meter for measurement of active and reactive power of three phase balanced load.
10. Use two watt-meters for measuring active power of three-phase balanced load.
11. Calibrate single phase electronic energy meter by direct loading.
12. Troubleshoot single phase electronic energy meter.
13. Use digital multi-meter for measurement of AC/DC current, AC/DC voltage.
14. Use Kelvin's double bridge for measurement of low resistance.
15. Use voltmeter and ammeter method for measurement of medium resistance.
16. Use Megger for insulation resistance measurements.
17. Use earth tester for measurement of earth resistance.
18. Use CRO for the Measurement of supply frequency in single-phase circuit.
19. Use Tri-vector meter for measuring kW, and kVA of a power line.

**COURSE OUTCOMES:**

The theory, practical experiences and relevant soft skills associated with this course are to be taught and implemented, so that the student demonstrates the following industry-oriented Cos associated with the above-mentioned competency:

- a) Check the working of the electrical measuring instrument.
- b) Use different types of measuring instruments for measuring voltage and current.

**Course objectives:**

The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences:

- Provide the basic concept of DC machines and Transformers.
- Develop the skills of the students in the areas of machines and transformers by identifying the current problem in the industries and bring solutions through research.
- Diagnose the condition of DC machines and Transformers.
- Maintain electric motors and transformers.

**Practical's:**

1. Dismantle a DC machine.
2. Reverse the direction of rotation of the DC shunt motor.
3. Perform brake test on DC shunt motor.
4. Control the speed of DC shunt motor by different methods.
5. Control the speed of DC series motor by different methods.
6. Perform the brake test on DC series motor.
7. Check the functioning of single-phase transformer.
8. Determine regulation and efficiency of single-phase transformer by direct loading.
9. Perform open circuit and short circuit test on single phase transformer to determine equivalent circuit constants, voltage regulation and efficiency.
10. Perform parallel operation of two single phase transformers to determine the load current sharing.
11. Perform parallel operation of two single phase transformers and determine the apparent and real power load sharing.
12. Perform polarity test on a single-phase transformer whose polarity markings are masked.
13. Perform phasing out test on a three-phase transformer whose phase markings are masked.
14. Connect the auto-transformer in step-up and step-down modes noting the input/output readings.
15. Check the functioning of the CT, PT and isolation transformer.
16. Test the pulse transformer.

**Course outcomes:**

The theory, practical experiences and relevant soft skills associated with this course are to be taught and implemented, so that the student demonstrates the following industry-oriented Cos associated with the above-mentioned competency:

1. Apply different modulation and demodulation techniques used in analog communication.
2. Identify and solve basic communication problems.
3. Analyze different transmitter and receiver circuits.
4. Compare and contrast design issues, advantages, disadvantages and limitations of analog communication systems.

## Course Learning Objectives:

This Lab course is intended to practice whatever is taught in theory class of ‘Web Technologies’. Some of the things that should necessary be covered in lab.

## Course outcomes:

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Home page Development static pages (using Only HTML) of an online Book store.	04	
<b><u>Unit – 2</u></b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.	06	
<b><u>Unit – 3</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	06	
<b><u>Unit – 4</u></b>	Write an HTML code to display your CV on a web page.	04	
<b><u>Unit – 5</u></b>	Write an XML program to display products.	05	
<b><u>Unit – 6</u></b>	Create a web page with all types of Cascading style sheets.	06	
<b><u>Unit – 7</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	05	
<b><u>Unit – 8</u></b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.	04	

This is a skill course. More student practice and try to find solution on their own, better it will be.

## Course objectives:

- To understand General Principles of Mechanical Engineering.
- To understand laws of thermodynamics, thermal and thermodynamic Processes.
- To understand working principles of power developing and power absorbing devices.
- To understand basic materials and manufacturing processes.

## CONTENTS: THEORY

Unit	Name of Topics	Hrs.
<b>Unit-I</b>	<b>1.1</b> Introduction to Thermodynamics - Role of Thermodynamics in Engineering and Science, Types of Systems, Thermodynamic Equilibrium, Properties, State, Process and Cycle, <b>1.2</b> Elementary introduction to Zeroth, First and Second laws of thermodynamics, Heat and Work Interactions for various non-flow and flow processes; <b>1.3</b> Concept of Heat Engine, Heat Pump & Refrigerator, Efficiency/ COP; Kelvin- Planck and Clausius Statements, Carnot Cycle, Carnot Efficiency, T-S and P-V Diagrams, Concept of Entropy (Definition and simple problems only).	<b>12</b>
<b>Unit-II</b>	<b>2.1</b> Heat transfer & Thermal Power Plant - Modes of Heat Transfer; Conduction: Composite Walls and Cylinders, Combined Conduction and Convection: <b>2.2</b> Overall Heat Transfer Co- efficient, Simple Numerical Problems: Thermal Power Plant Layout; Rankine Cycle; <b>2.3</b> Fire Tube and Water Tube boilers, Babcock & Wilcox, Cochran Boilers; (Related simple problems only).	<b>12</b>
<b>Unit-III</b>	<b>3.1</b> Steam Turbines - Impulse and Reaction Turbines; Condensers: Jet & Surface Condensers, Cooling Towers; <b>3.2</b> Internal Combustion Engines and Refrigeration: Otto, Diesel and Dual cycles; P-V and T-S Diagrams; IC Engines: 2 – Stroke and 4– Stroke I.C. Engines, S.I. and C.I. Engines	<b>14</b>
<b>Unit-IV</b>	<b>4.1</b> Materials and Manufacturing Processes - Engineering Materials, Classification and their Properties; Metal Casting, Moulding, Patterns, <b>4.2</b> Metal Working: Hot Working and Cold Working, Metal Forming: Extrusion, Forging, Rolling, Drawing, <b>4.3</b> Gas Welding, Arc Welding, Soldering, and Brazing.	<b>14</b>
<b>Unit-V</b>	<b>5.1</b> Machine Tools and Machining Processes - Machine Tools: Lathe Machine and types, Lathe Operations, <b>5.2</b> Milling Machine and types, Milling Operations, Shaper and Planer Machines: Differences, <b>5.3</b> Quick-Return Motion Mechanism, Drilling Machine: Operations, Grinding Machine: Operations	<b>8</b>

**Course outcomes:**

**At the end of the course, the student will be able to:**

- CO1 Understand basics of thermodynamics and components of a thermal power plant**
- CO2 Understand basics of heat transfer, refrigeration and internal combustion engines**
- CO3 Understand mechanism of thermal power plant and boiler operation**
- CO4 Identify engineering materials, their properties, manufacturing methods encountered in engineering practice**
- CO5 Understand functions and operations of machine tools including milling, shaping, grinding and lathe machines**

## Course objectives:

- To understand the importance of cutting fluids & lubricants in machining.
- To study various types of basic production processes. To select, operate and control the appropriate processes for specific applications.
- To understand the concept of gear making and list various gear materials.
- To understand the importance of press tools and understand various die operations.
- To understand Grinding and finishing processes.

## CONTENTS: THEORY

<b>Unit</b>	<b>Name of Topics</b>	<b>Hrs.</b>
<b>Unit-I</b>	<p><b>1.1</b> Cutting Fluids &amp; Lubricants -Introduction; Types of cutting fluids, Fluids and coolants required in turning, drilling, shaping, sawing &amp; broaching; Selection of cutting fluids, methods of application of cutting fluid; Classification of lubricants (solid, liquid, gaseous), Properties and applications of lubricants.</p> <p><b>1.2</b> Lathe Operations – Types of lathes – light duty, medium duty and heavy duty geared lathe, CNC lathe; Specifications; Basic parts and their functions; Operations and tools – Turning, parting off, Knurling, facing, Boring, drilling, threading, step turning, taper turning.</p>	<b>12</b>
<b>Unit-II</b>	<p><b>2.1</b> Broaching Machines -Introduction to broaching; Types of broaching machines – Horizontal type (Single ram &amp; duplex ram), Vertical type, pull up, pull down, and push down; Elements of broach tool; broach teeth details; Nomenclature; Tool materials.</p> <p><b>2.2</b> Drilling – Classification; Basic parts and their functions; Radial drilling machine; Types of operations; Specifications of drilling machine; Types of drills and reamers.</p>	<b>10</b>
<b>Unit-III</b>	<p><b>3.1</b> Welding - Classification; Gas welding techniques; Types of welding flames; Arc Welding – Principle, Equipment, Applications; Shielded metal arc welding; Submerged arc welding; TIG / MIG welding; Resistance welding - Spot welding, Seam welding, Projection welding; Welding defects.</p> <p>Welding defects; Brazing and soldering: Types, Principles, Applications.</p> <p><b>3.2</b> Milling – Introduction; Types of milling machines: plain, Universal, vertical; constructional details, specifications; Milling operations: simple, compound and differential indexing; Milling cutters – types; Nomenclature of teeth; Teeth materials; Tool signature of milling cutter; Tool &amp; work holding devices.</p>	<b>10</b>

<b>Unit-IV</b>	<p><b>4.1</b> Gear Making - Manufacture of gears – by Casting, Moulding, Stamping, Coining Extruding, Rolling, Machining; Gear generating methods: Gear Shaping with pinion cutter &amp; rack cutter;</p> <p><b>4.2</b> Gear hobbing; Description of gear hob; Operation of gear hobbing machine; Gear finishing processes; Gear materials and specification; Heat treatment processes applied to gears.</p> <p><b>4.3</b> Press working – Types of presses and Specifications, Press working operations –Cutting, bending, drawing, punching, blanking, notching, lancing; Die set components- punch and die shoe, guide pin, bolster plate, stripper, stock guide, feed stock, pilot; Punch and die clearances for blanking and piercing, effect of clearance.</p>	<b>12</b>
<b>Unit-V</b>	<p><b>5.1</b> Grinding and finishing processes - Principles of metal removal by Grinding; Abrasives – Natural &amp; Artificial; Bonds and binding processes: Vitrified, silicate, shellac, rubber, Bakelite.</p> <p><b>5.2</b> Factors affecting the selection of grinding wheels: size and shape of wheel, kind of abrasive, grain size, grade and strength of bond, structure of grain, spacing, kinds of binding material;</p> <p><b>5.3</b> Standard marking systems: Meaning of letters &amp; numbers sequence of marking, Grades of letters;</p> <p><b>5.4</b> Grinding machines classification: Cylindrical, Surface, Tool &amp; Cutter grinding machines; Construction details; Principle of centerless grinding; Advantages &amp; limitations of center less grinding; Finishing by grinding: Honing, Lapping, Super finishing; Electroplating: Basic principles, Plating metals, applications;</p> <p><b>5.5</b> Hot dipping: Galvanizing, Tin coating, Parkerizing, Anodizing; Metal spraying: wire process, powder process and applications;</p> <p><b>5.6</b> Organic coatings: Oil base Paint, Lacquer base, Enamels, Bituminous paints, rubber base coating; finishing specifications.</p>	<b>16</b>

### Course Learning Objectives:

- To give a good understanding of and thorough insight into all important aspects of thermal systems, energy control and the general issue of energy.
- To understand the principles & working of various power producing & power absorbing de- vices.
- To study, analyze and evaluate the operation and the performance of I.C. engines, compressors and refrigerators, to apply pinch technology and to critically analyze and describe the global behavior of integrated thermal systems.

### CONTENTS: THEORY

Unit	Name of Topics	Hrs.
<b>Unit-I</b>	<p><b>1.1</b> Sources of Energy - Brief description of energy Sources: Classification of energy sources- Renewable, Non-Renewable; Fossil fuels, including CNG, LPG;</p> <p><b>1.2</b> Solar Energy: Flat plate and concentrating collectors &amp; its applications (Solar Water Heater, Photovoltaic Cell, Solar Distillation);</p> <p><b>1.3</b> Wind Energy; Tidal Energy; Ocean Thermal Energy; Geothermal Energy; Biogas, Biomass, Bio-diesel; Hydraulic Energy, Nuclear Energy; Fuel cell.</p>	<b>08</b>
<b>Unit-II</b>	<p><b>2.1</b> Internal Combustion Engines - Assumptions made in air standard cycle analysis; Brief description of Carnot, Otto and Diesel cycles with P-V and T-S diagrams; Internal and external combustion engines; advantages of I.C. engines over external combustion engines;</p> <p><b>2.2</b> Classification of I.C. engines; neat sketch of I.C. engine indicating component parts; Function of each part and materials used for the component parts - Cylinder, crank case, crank pin, crank, crank shaft, connecting rod, wrist pin, piston, cooling pins cylinder heads, exhaust valve, inlet valve;</p> <p><b>2.3</b> Working of four-stroke and two-stroke petrol and diesel engines; Comparison of two stroke and four stroke engines; Comparison of C.I. and S.I. engines; Valve timing and port timing diagrams for four stroke and two stroke engines. (Related simple problems only).</p>	<b>12</b>
<b>Unit-III</b>	<p><b>3.1</b> I.C. Engine Systems - Fuel system of Petrol engines; Principle of operation of simple and Zenith carburetors; Fuel system of Diesel engines; Types of injectors and fuel pumps;</p> <p><b>3.2</b> Cooling system-air-cooling, water-cooling system with thermosiphon method of circulation and water-cooling system with radiator and forced circulation (description with line diagram). Comparison of air cooling and water-cooling system;</p> <p><b>3.3</b> Ignition systems – Battery coil ignition and magneto ignition (description and working). Comparison of two systems;</p> <p><b>3.4</b> Types of lubricating systems used in I.C. engines with line diagram; Types of governing of I.C.</p>	<b>12</b>

	engines – hit and miss method, quantitative method, qualitative method and combination methods of governing; their applications; Objective of super charging. (Related simple problems only).	
<b>Unit-IV</b>	<p><b>4.1</b> Performance of I.C. Engines - Brake power; Indicated power; Frictional power; Brake and Indicated mean effective pressures; Brake and Indicated thermal efficiencies; Mechanical efficiency; Relative efficiency;</p> <p><b>4.2</b> Performance test; Morse test; Heat balance sheet; Methods of determination of B, P., I.P. and F.P.; Simple numerical problems on performance of I.C. engines.</p>	<b>14</b>
<b>Unit-V</b>	<p><b>5.1</b> Air Compressors - Functions of air compressor; Uses of compressed air; Types of air compressors; Single stage reciprocating air compressor - its construction and working (with line diagram) using P-V diagram; Multi stage compressors – Advantages over single stage compressors; Rotary compressors: Centrifugal compressor, axial flow type compressor and vane type compressors.</p> <p><b>5.2</b> Refrigeration &amp; Air- conditioning Refrigeration; Refrigerant; COP; Air Refrigeration system: components, working &amp; applications; Vapour Compression system: components, working &amp; applications; Air conditioning; Classification of Air- conditioning systems; Comfort and Industrial Air-Conditioning; Window Air-Conditioner; Summer Air-Conditioning system, Winter Air-Conditioning system, Year-round Air- Conditioning system. ### Course Objectives:

- To Practice the casting principles and operations in foundry.
- To Practice the operation of Lathe.
- To Practice the joining of metals using different Welding techniques.

### Course Content:

- S.No. Topics for practice
- I Moulding & casting of (i) Connecting rod (ii) Solid bearing (iii) V-Pulley/Gear Pulley
  - II Arc welding (i) Lap Joint (ii) Butt Joint (iii) T-Joint
  - III Gas welding (i) Lap Joint (ii) Butt Joint
  - IV Spot welding (i) Lap Joint
  - V Turning Exercise (i) Facing, Step Turning & Chamfering (ii) Step Turning & Taper Turning (iii) Step Turning & Groove Cutting (iv) Step Turning & Knurling (v) Step Turning & Thread Cutting (vi) Turning and Drilling
  - VI Grinding the Lathe Cutting tools to the required angles
  - VII Study of Lathe, drilling machine, shaping machine and slotting machine
  - VIII The dismantling some of the components of lathe and then assemble the same
  - IX List the faults associated with lathe and its remedies
  - X The routine and preventive maintenance procedure for lathe

6. Manufacturing process – Myro N Begman, 5 th edition, Tata McGraw Hill, New Delhi

### Course outcomes:

At the end of the course, the student will be able to:

- CO1 Prepare a mould sand mix and molten metal and calculate the amount of metal to be poured in the mould
- CO2 Centre the job and select the proper tool to perform the job on lathe machine. CO3 Calculate the taper angle and practice different taper turning methods on lathe.
- CO4 Prepare the edges for welding and select the suitable electrode, voltage and current.
- CO5 Operate the welding transformer and generator to perform various weld joint operations.

### Course Objectives:

- To calibrate the given flow measuring device.
- To apply the knowledge acquired in theory subject.
- To analyze the performance of turbines and pumps.

### Course Content:

S. No.	Topics for practice
I	Verification of Bernoulli's theorem.
II	Determination of Coefficient of Discharge of Venturi meter.
III	Determination of Coefficient of Discharge, coefficient of contraction and coefficient of velocity of Orifice meter.
IV	Determination of coefficient of friction of flow through pipes.
V	Determination of force exerted by the jet of water on the given vane.
VI	Determination of minor losses of flow through pipes.
VII	Calibration of pressure gauge using dead weight pressure gauge tester.
VIII	Trial on centrifugal pump to determine overall efficiency.
IX	Trial on reciprocating pump to determine overall efficiency.
X	Trial on Pelton wheel to determine overall efficiency.
XI	Trial on Francis/Kaplan turbine to determine overall efficiency.

### Reference Books:

# WEB TECHNOLOGY LAB

<b>SUBJECT CODE: 2018308</b>	<b>Practical</b>			No. of period in one session:			<b>Credits  01</b>
	No. of Periods per Week			Full Marks:	:	25	
	L	T	P/S	ESE	:	25	
		-	02	Internal	:	07	
				External	:	18	

### Course Learning Objectives:

This Lab course is intended to practice whatever is taught in theory class of 'Web Technologies'. Some of the things that should necessary be covered in lab.

### Course outcomes:

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Home page Development static pages (using Only HTML) of an online Book store.	04	
<b><u>Unit – 2</u></b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.	06	
<b><u>Unit – 3</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	06	
<b><u>Unit – 4</u></b>	Write an HTML code to display your CV on a web page.	04	
<b><u>Unit – 5</u></b>	Write an XML program to display products.	05	
<b><u>Unit – 6</u></b>	Create a web page with all types of Cascading style sheets.	06	
<b><u>Unit – 7</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	05	
<b><u>Unit – 8</u></b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.	04	

This is a skill course. More student practice and try to find solution on their own, better it will be.

- To understand the working principles of various methods used in determination of properties of fuels.
- To observe different parts of I.C. engine and understand their working.
- To identify the physical differences between S.I. and C.I. engines and 2-S and 4-S engines.

### Course Content:

S.No. Topics for practice

I Flash & Fire point tests using Abel's/Cleveland/Pensky Martin

Apparatus

II Viscosity measurement using Say bolt viscometer

III Calorific value tests using Bomb Calorimeter (Solid and Liquid fuels) and Junkers Gas Calorimeter (Gaseous fuels)

IV Carbon residue test using Conradson's apparatus.

V Assembling and disassembling of I.C. Engines

VI Port timing diagram of Petrol engine

VII Port timing diagram of Diesel engine VIII Valve timing diagram of Petrol engine IX Valve timing diagram of Diesel engine

VIII Study of petrol and diesel engine components and Models Reference Books:

1. Thermal Engineering – P.L. Ballaney, Khanna Publishers, 2002

2. A Course in Thermal Engineering – S. Domkundwar & C.P. Kothandaraman, Dhanpat Rai & Publication New Delhi

3. Thermal Engineering – R.S. Khurmi and J.K. Gupta, 18th Edition, S. Chand & Co, New Delhi

Course outcomes:

At the end of the course, the student will be able to:

CO1 Understand the determination of flash and fire point of a given sample of fuel using given apparatus (Abels, Cleveland & Penesky martin)

CO2 Understand the determination of Viscosity of a given sample of oil using given apparatus.

CO3 Understand the determination of Calorific value of a given sample of fuel using given apparatus.

CO4 Understand the determination of amount of carbon residue of a given sample of petroleum product.

CO5 Draw VTD /PTD of given I.C. Engine and understand how the processes are controlled during its operation.

CO6 Understand the functions of various parts of IC engines and the working of IC engines.

- How important is it really to do an internship before applying for a job?
- Do you need to get the hands-on experience that is talked about when discussing the importance of internships or is it a matter of just landing the right job?

During the Course duration year, students may feel overwhelmed with coursework, sports, or co-curricular activities that may keep them extremely busy while leaving no time to think of doing an internship or a job. Many students may also feel that they are caught in a bind since they need to make money to pay for their expenses but they can only find unpaid internships in their field.

#### Getting Your Feet Wet

Internships are a proven way to gain relevant knowledge, skills, and experience while establishing important connections in the field. Internships are also a way to get your feet wet and find out if a specific field is something you could see yourself doing full-time.

Internships may be completed during fall or spring semester or full time over the course of the summer. Unpaid internships may be easier to get but may also pose problems if making money is necessary, especially during the summer. There are many who cannot afford to work for no pay, so they are forced into doing menial jobs such as wait staff or bartending to work their way through college. It may preclude some from doing an internship which may be a detriment when hoping to get a full-time job.

#### Financial Considerations

Financial considerations when looking for an internship can make a big difference in the decision-making process. Sometimes, students will take a part-time or full-time job to supplement the time that they are spending at their internship. Whether an internship is paid or unpaid, there are many things that need to be taken into consideration to decide if an internship is worthwhile. It's important to decide if an internship will ultimately be in the best interest of the student to help meet the requirements needed when applying for a full-time job.

#### How to Get Funding for an Internship

Some colleges also offer funded internships for students. Check with your college to see if they offer a funded internship program that may help to meet the requirements of your college curriculum while offering experiences that employers seek when hiring new college graduates for entry-level jobs. Many foundations and organizations offer financing to college students so they may try writing to a number of them to see if they provide funding for college students seeking to do internships in their field.

#### Having an Internship and a Job

Students may elect to do a summer internship a couple of days per week while working a part-time job for the remainder of the time. For those who need to maximize the amount of money they make over the course of the summer, they may look into doing an internship during the academic year when they are less likely to expect to make money to help defray their college expenses.

In addition to internships, volunteer opportunities can also be an excellent way to gain experience and exposure to the workforce. Employers love to see volunteer experiences on a student's resume.

Volunteering shows commitment to causes and certain values that are intrinsic to the individuals who have participated in these types of experiences. Employers look for employees who are publicly engaged and who take an interest in community service and in doing good work.

#### What Employers Want

Internships and volunteer experiences make candidates more competitive in the job market. In addition to gaining exposure and experience in the field, they also provide an opportunity to see if the particular career field is the right one based on getting personal experience in the field. No matter what opportunities you engage in, it's important to maintain professionalism and take on the individual responsibility that is required.

#### The Benefits of Completing an internship

By doing a great job and completing more than what is required of you in your internship, you will be creating a great impression that can provide a great reference letter at the least, and may even potentially lead to a potential job offer. When you leave the organization at the end of the internship, you should ask for a recommendation letter that you can keep on file for future reference.

#### Internships Are a Learning Experience

Internships are a great way to learn the ropes so even if you find yourself filing or making coffee, as long as you're learning about the field take advantage of the opportunity and don't take the experience lightly. Asking questions is one key to learning in an internship and keeping yourself flexible throughout the internship can open many doors.

### ENGLISH

**Rationale:**

Communication is the most important part of managerial process. It is expected by the diploma students to excel in written and oral communication and also to put up an effective presentation both in Hindi and English language.

The aim of the subject 'Language and Communication Skill-English' is to provide the theoretical knowledge for acquiring skills in effective Communication along with their higher authorities and sub-ordinates. The Course will also help to develop students personality and subsequently prepare them for a successful professional life as an office assistant / Salesman/ Library assistant/ Librarian/ Designer/ receptionist, etc. Therefore, the theory curriculum has been designed to meet the above need by bringing about an improvement in their presentation method.

Creative writing helps to enhance writing and fluency skill in any language. Writing helps to express our views directly originating from our mind. Creative Writing also enhances our verbal skills. After all, writing makes a man perfect.

**Objectives:**

The students will be able to –

- Develop their personality traits.
- Make them enable to understand the conversation with their higher authorities/ sub ordinates/ other persons concerned.
- Expose their personality effectively.
- Develop good relations/ contacts with different types of persons concerned.
- Develop skill of impromptu well as public speech.
- Develop writing skill.

### Course Learning Objective:

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

### Objective:

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

**समूहिक परिचर्चा**

समूहिक परिचर्चा अनेक व्यक्ति को विविध विचारों एवं दृष्टिकोण के साथ किसी एक निर्धारित विषय पर विमर्श अथवा किसी समान्य समस्या के समाधान के लिए आयोजित किया जाता है। इस प्रकार की परिचर्चा में प्रभावशाली प्रदर्शन के लिए भाषा पर नियंत्रण अनिवार्य है ताकि विचारों की अभिव्यक्ति समुचित ढंग से की जा सकें। प्रभावशाली मौखिक संप्रेषण के लिए शब्दों का समुचित प्रयोग एवं सही उच्चारण भी

अत्यंत महत्वपूर्ण है। वर्तमान समय में नियुक्तियों के लिए सामूहिक परिचर्चा अभ्यर्थी के वृत्तित्व के मूल्यांकन में विशिष्ट महत्व रखता है। छात्रों को इस विषय में जागरूक एवं प्रशिक्षित करने हेतु पाठ्यक्रम में सम्मिलित किया गया है :-

## Course Learning Objective:

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

## Objective:

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

### Course Learning Objectives:

This Lab course is intended to practice what is taught in theory class of 'Computer Programming' and become proficient in computer programming. Computer programming is all about regular practice. Students should work on solved and unsolved problems listed in the text books, and the problems given by the teacher. Some of the topics that should necessary be covered in lab are listed below.

### Course outcomes:

Student should be able to write code snippets, and then compile, debug and execute them.

<b>Content: Practical</b>		<b>Hrs</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Familiarization with programming environment (Editor, Compiler, etc.)		
<b><u>Unit – 2</u></b>	Programs using, I/O statements and various operators		
<b><u>Unit – 3</u></b>	Programs using expression evaluation and precedence		
<b><u>Unit – 4</u></b>	Programs using decision making statements and branching statements		
<b><u>Unit – 5</u></b>	Programs using loop statements		
<b><u>Unit – 6</u></b>	Programs to demonstrate applications of n dimensional arrays		
<b><u>Unit – 7</u></b>	Programs to demonstrate use of string manipulation functions		
<b><u>Unit – 8</u></b>	Programs to demonstrate parameter passing mechanism		
<b><u>Unit – 9</u></b>	Programs to demonstrate recursion		
<b><u>Unit – 10</u></b>	Programs to demonstrate use of pointers		
<b><u>Unit – 11</u></b>	Programs to demonstrate command line arguments		
<b><u>Unit – 12</u></b>	Programs to demonstrate dynamic memory allocation		
<b><u>Unit – 13</u></b>	Programs to demonstrate file operations		

The language of choice will be C. This is a skill course. More you practice, better it will be.

## Course Learning Objective:

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

## Objective:

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

**Rationale:** Textile fibres are an extremely important part of the textile manufacturing process. In this course the students will explore various kinds of textile fibres and learn what makes them right for the job.

**Objectives:** The students will be able to –

- Know about various kinds of textile fibres.
- Explain properties and uses of different textile fibres.
- Identify various textile fibres.

**Rationale:** Yarn Manufacture is one of main activities for a diploma holder technician in Textile Engineering. He is required to handle the yarn manufacture machineries, tools and equipments and also supervise the yarn manufacturing processes. He must be well versed with the subject of Yarn Manufacture.

The subject is being introduced to develop the understanding of yarn manufacturing processes. It will help in discharge of his duties in the world of work as he can understand a problem, analyse the same and take an appropriate decision as and when the job demand.

**Objectives:** After completion of the course student will be able to

- Define the terminologies related with textile machineries and processes.
- Explain the principle and working of the machine
- Sketch the machine parts and label them
- Understand the process of production and their related problem

## Course Learning Objectives:

This Lab course is intended to practice what is taught in theory class of 'Computer Programming' and become proficient in computer programming. Computer programming is all about regular practice. Students should work on solved and unsolved problems listed in the text books, and the problems given by the teacher. Some of the topics that should necessary be covered in lab are listed below.

## Course outcomes:

Student should be able to write code snippets, and then compile, debug and execute them.

<b>Content: Practical</b>		<b>Hrs</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Familiarization with programming environment (Editor, Compiler, etc.)		
<b><u>Unit – 2</u></b>	Programs using, I/O statements and various operators		
<b><u>Unit – 3</u></b>	Programs using expression evaluation and precedence		
<b><u>Unit – 4</u></b>	Programs using decision making statements and branching statements		
<b><u>Unit – 5</u></b>	Programs using loop statements		
<b><u>Unit – 6</u></b>	Programs to demonstrate applications of n dimensional arrays		
<b><u>Unit – 7</u></b>	Programs to demonstrate use of string manipulation functions		
<b><u>Unit – 8</u></b>	Programs to demonstrate parameter passing mechanism		
<b><u>Unit – 9</u></b>	Programs to demonstrate recursion		
<b><u>Unit – 10</u></b>	Programs to demonstrate use of pointers		
<b><u>Unit – 11</u></b>	Programs to demonstrate command line arguments		
<b><u>Unit – 12</u></b>	Programs to demonstrate dynamic memory allocation		
<b><u>Unit – 13</u></b>	Programs to demonstrate file operations		

The language of choice will be C. This is a skill course. More you practice, better it will be.

**Rationale:** Diploma holder technician in Textile Engineering is very frequently required to set the machines for their efficient running. The course is introduced to develop the skills to measure the diameter of pulley, set machines, and sketch the machine parts for better understanding of the subject.

**Objectives:** Able to develop skill to

- measure diameter of pulley
- Set machines for optimum operation and productivity
- Sketch gear and gearing
- Sketch different machine parts
- Dismantle, resetting the machine parts for better understanding of their functioning.

*Rationale:* -

The Subject will help the students to understand various facts, concepts and procedures of perspective drawing. The subject will also help in making models of different materials, free hand sketching of monuments etc.

Objective :-

The Student will be able to :-

- 1) Understand different methods of drawing perspective views
- 2) Understand free hand coloured drawings of buildings and monuments
- 3) Make models
- 4) Sketch free hand coloured perspective.

*Rationale:* -

This subject will help the students to make aware of the primary and modern building materials used in construction, their properties, types and common usage

*Objective:* -

The student will be able to: -

- 1) Understand different methods of drawing perspective views
- 2) Understand free hand-colored drawings of buildings and monuments
- 3) Make models
- 4) Sketch free hand colored perspective.

### *RATIONALE: -*

Freehand sketching, colouring and rendering like sketching, shades and shadows, lettering and printing forms important components of Architecture discipline. Graphic presentation forms a core subject for preparing perspective drawings, scale drawings, three dimensional views, furniture drawings and layouts. Therefore, this course aims at equipping the students with the skills of graphic presentation and other above mentioned areas. Teachers are expected to lay considerable stress on practical work so that students attain sufficient skills in sketching, lettering and printing and desired competencies for preparing good quality perspectives of interior and exterior of buildings in different media.

Teachers are also expected to stress upon appropriate line work, properties, dimensioning lettering and printing. Diploma holders in Architectural Assistantship find employment with private architects and also majority of them go for Self-employment. Therefore, they are required to develop aptitude / skills to design residential, commercial and other public buildings.

Teachers while imparting instruction / giving assignments to students are expecting to teach various elements of design like form function, balance, light of shadow, shape plane, volume, line, rhythm, proportions, textures and other such related elements. Teachers are also expected to show various types of designs of small building to develop and appreciation for this subject.

Teachers should also motivate students to maintain sketch book / portfolio of all the assignments given to the students.

In the present times an architectural assistant should be capable of drafting drawings on the computer as most of the architects lay greater stress on computerized drawings for their ease of drafting, editing, managing and presentation. At the end of the course the students should be able to make 2-D & 3-D architectural drawings for presentation and construction purposes. The student should get familiar with the latest Auto CAD software

Note: Relevant theory may be taught along with practical exercises as sessional records in each topic.

### RATIONALE

Architectural Designs drawing is basic of architecture. It prepares the students to become a good architectural assistant. It helps in learning further aspects of architectural drawings. Also, this subject will help the students to understand and attain basic skills of Architectural Drawing in order to graphically represent what they learn in other subjects.

Objectives:

The students will be able to:

- 1) Understand drafting skills and techniques
- 2) Develop the given sketch design in to final drawing
- 3) Develop bubble diagram in to final drawings
- 4) Prepare various types of 2 Dimensional drawings in CAD
- 5) Design simple buildings as per requirements

### DETAILED CONTENTS

- Note:**
- a) All dimensions in all segments to be related to human figures.
  - b) Dimensions should be resolved from actual measurements.
  - c) Minimum of 10 sheets should be made in the semester

### Course Learning Objective:

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

### Objective:

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

**Rationale:**

Electronics is a major part of our day-to-day life. In each and every field electronic systems are used. Basic electronics is one of the subjects which are the base of all advance electronics. It starts with PN junction which makes the student to follow the functioning of all semiconductor-based electronics. This is a core group subject and it develops cognitive and psychomotor skills.

**Objectives:** Student will be able to:

- 1) Describe the formation of PN junction.
- 2) Draw the characteristics of basic components like diode, transistor etc.
- 3) Draw and describe the basic circuits of rectifier, filter, regulator and amplifiers.
- 4) Know voltage amplifiers.
- 5) Test diode and transistors.
- 6) Read the data sheets of diode and transistors.

				<b>External</b>	<b>:</b>	<b>35</b>	

**Course Learning Objectives:**

This Lab course is intended to practice what is taught in theory class of ‘Computer Programming’ and become proficient in computer programming. Computer programming is all about regular practice. Students should work on solved and unsolved problems listed in the text books, and the problems given by the teacher. Some of the topics that should necessary be covered in lab are listed below.

**Course outcomes:**

Student should be able to write code snippets, and then compile, debug and execute them.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Familiarization with programming environment (Editor, Compiler, etc.)		
<b><u>Unit – 2</u></b>	Programs using, I/O statements and various operators		
<b><u>Unit – 3</u></b>	Programs using expression evaluation and precedence		
<b><u>Unit – 4</u></b>	Programs using decision making statements and branching statements		
<b><u>Unit – 5</u></b>	Programs using loop statements		
<b><u>Unit – 6</u></b>	Programs to demonstrate applications of n dimensional arrays		
<b><u>Unit – 7</u></b>	Programs to demonstrate use of string manipulation functions		
<b><u>Unit – 8</u></b>	Programs to demonstrate parameter passing mechanism		
<b><u>Unit – 9</u></b>	Programs to demonstrate recursion		
<b><u>Unit – 10</u></b>	Programs to demonstrate use of pointers		
<b><u>Unit – 11</u></b>	Programs to demonstrate command line arguments		
<b><u>Unit – 12</u></b>	Programs to demonstrate dynamic memory allocation		
<b><u>Unit – 13</u></b>	Programs to demonstrate file operations		

The language of choice will be C. This is a skill course. More you practice, better it will be.

### **Course Learning Objectives:**

This Lab course is intended to practice whatever is taught in theory class of 'Web Technologies'. Some of the things that should necessary be covered in lab.

### **Course outcomes:**

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Home page Development static pages (using Only HTML) of an online Book store.	04	
<b><u>Unit – 2</u></b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.	06	
<b><u>Unit – 3</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	06	
<b><u>Unit – 4</u></b>	Write an HTML code to display your CV on a web page.	04	
<b><u>Unit – 5</u></b>	Write an XML program to display products.	05	
<b><u>Unit – 6</u></b>	Create a web page with all types of Cascading style sheets.	06	
<b><u>Unit – 7</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	05	
<b><u>Unit – 8</u></b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.	04

### Course Learning Objective:

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

### Objective:

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

### Rationale and objectives: -

The instrument part deals with the principles and functioning of measuring instruments. Instrumentation is the use of measuring instruments to monitor and control of process variables within a laboratory, production or manufacturing area. While sensors and values are important in all aspects of engineering, they assume greatest importance in the study of automatic control which is termed process control when applied in process industries.

### Rationale

The subject will help the students to learn concepts, facts, principle and working of digital circuits. These ideas can be used for designing sequential and combinational circuits. Which forms the basic of any electronics system.

### Objective

The objective of this subject is to enable the students to know basic concepts of digital electronics. After undergoing this course, the students will have the concepts and awareness of various arithmetic circuits, registers, counter design, multiplexers, demultiplexers, encoders and decoder etc.

				<b>External</b>	<b>:</b>	<b>35</b>	

### Course Learning Objectives:

This Lab course is intended to practice what is taught in theory class of 'Computer Programming' and become proficient in computer programming. Computer programming is all about regular practice. Students should work on solved and unsolved problems listed in the text books, and the problems given by the teacher. Some of the topics that should necessary be covered in lab are listed below.

### Course outcomes:

Student should be able to write code snippets, and then compile, debug and execute them.

<b>Content: Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Familiarization with programming environment (Editor, Compiler, etc.)		
<b><u>Unit – 2</u></b>	Programs using, I/O statements and various operators		
<b><u>Unit – 3</u></b>	Programs using expression evaluation and precedence		
<b><u>Unit – 4</u></b>	Programs using decision making statements and branching statements		
<b><u>Unit – 5</u></b>	Programs using loop statements		
<b><u>Unit – 6</u></b>	Programs to demonstrate applications of n dimensional arrays		
<b><u>Unit – 7</u></b>	Programs to demonstrate use of string manipulation functions		
<b><u>Unit – 8</u></b>	Programs to demonstrate parameter passing mechanism		
<b><u>Unit – 9</u></b>	Programs to demonstrate recursion		
<b><u>Unit – 10</u></b>	Programs to demonstrate use of pointers		
<b><u>Unit – 11</u></b>	Programs to demonstrate command line arguments		
<b><u>Unit – 12</u></b>	Programs to demonstrate dynamic memory allocation		
<b><u>Unit – 13</u></b>	Programs to demonstrate file operations		

The language of choice will be C. This is a skill course. More you practice, better it will be.

Skills to be developed:

**Intellectual Skills:**

1. Identification of instruments
2. Selection of instruments and equipment for measurement **Motor**

**Skills:**

1. Accuracy in measurement
2. Making proper connections

**List of  
Practical's:**

1. Measurement of Current and Voltages by Low range ammeter and voltmeter respectively with shunt and multiplier.
2. Measurement of Current and Voltages by Low range ammeter and voltmeter respectively by Using Current Transformer and potential Transformer.
3. Measurement of active and reactive power in three phase balanced load by single wattmeter method.
4. Measurement of active and reactive power in three phase balanced load by two wattmeter method and observe the effect of Power Factor variation on Wattmeter reading.
5. Calibration of Energy meter at various power factor by standard energy meter.
6. Measurement of energy in single phase & three phase balanced load using Electronic Energy Meter.
7. Measurement of Low resistance by Kelvin's Double Bridge.
8. Measurement of Medium resistance by Wheatstone bridge.
9. Measurement of Insulation Resistance by Megger.
10. a) Measurement of Resistance, Voltage, Current, Voltage, Current in A.C & D. C. Circuit by using digital multimeter.  
b) Measurement of A.C. Current by Clip-on ammeter
11. Measurement of Earth Resistance by Earth Tester.
12. Measurement of Circuit Parameters by LCR meter.
13. Measurement of power factor of single phase and three phase load by PF meter and verifying through I, V and P measurement.
14. Observe the phase sequence of three phase circuit Using Rotating type phase sequence Indicator.
15. Measurement of Frequency of A.C. Supply Using Weston or Ferro dynamic type Frequency meter.

### Course Learning Objectives:

This Lab course is intended to practice whatever is taught in theory class of 'Web Technologies'. Some of the things that should necessary be covered in lab.

### Course outcomes:

Student will be able to program web applications using and will be able to do the following:

- Use LAMP Stack for web applications
- Write simple applications with Technologies like HTML, Java script, AJAX, PHP
- Connect to Database and get results
- Parse XML files Student will be able to develop/build a functional website with full features.

<b>Content : Practical</b>		<b>Hrs.</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Home page Development static pages (using Only HTML) of an online Book store.	04	
<b><u>Unit – 2</u></b>	Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.	06	
<b><u>Unit – 3</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	06	
<b><u>Unit – 4</u></b>	Write an HTML code to display your CV on a web page.	04	
<b><u>Unit – 5</u></b>	Write an XML program to display products.	05	
<b><u>Unit – 6</u></b>	Create a web page with all types of Cascading style sheets.	06	
<b><u>Unit – 7</u></b>	Write a PHP program to display a digital clock which displays the current time of the server.	05	
<b><u>Unit – 8</u></b>	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.	04	

This is a skill course. More student practice and try to find solution on their own, better it will be.

## Course Learning Objective:

Computers play a vital role in present day life, more so, in the professional life of technician engineers. In order to enable the students, use the computers effectively in problem solving, this course offers the modern programming language C along with exposition to various engineering applications of computers.

## Objective:

The objectives of this course are to make the students able to:

- Develop efficient algorithms for solving a problem.
- Use the various constructs of a programming language viz. conditional, iteration and recursion.
- Implement the algorithms in “C” language.
- Use simple data structures like array, stacks and linked list solving problems.
- Handling File in “C”.

## Course Objective / Rationale and Objectives

To identify a book or a bit of information from a huge store of knowledge, a professional needs to find out and make

available the right book (information) of the right reader (seeker) at the right moment.

For this purpose a student is trained to search out the common subjects are put under one heading. The process of classification is important and three such internationally accepted classification schemes have been discussed with special stress of Dewey Decimal Classification 19th edition.

Training to project the holdings of a library/information centre according to accepted universal codes of cataloguing with special stress on **AACR-II** has been discussed.

### **SL Topics**

1. Basic of classification
2. Theoretical of Foundation
3. Basic of Cataloguing
4. Normative Principles and Subject Cataloguing
5. Bibliographical Formats and other Aspects.

## Rationale and Objectives

This subject gives a unified picture of what Management is? And how it is applicable to various forms of Library and information center in our Country. It gives a basic knowledge about information officers function in the most useful and organized way.

A Student must be sensitive to the Environment of the place where may be operating. So he may to make decision and plan, organize and control activity in the environment prospective of his own service.

## Objective.

- To Familiar with Management information System.
- History of MIS.
- To able to make appropriate decision.
- To Familiar with its Techniques
- Evaluate its utility.

## Topics

- Management: Definition, Types and functions.
- Principles of Management.
- Concept and control in Library and information Centre.
- Management information system: Concept, Level, Planning in Libraries.
- Reporting System.
- Budgeting system
- Establishing Role of MIS in any types of Libraries.

## Rationale

The normative principle of Library and Information Science is to stress on the basic concept of the subject - "Books (and information) are for use and books (and information) are for all."

The chapter 'Library House Keeping Operation' has been designed with an aim to fulfill the above objective and in this process effort has been made to acquaint the student with each section of an information centre and the functions undertaken therein.

## Course Learning Objectives:

This Lab course is intended to practice what is taught in theory class of ‘Computer Programming’ and become proficient in computer programming. Computer programming is all about regular practice. Students should work on solved and unsolved problems listed in the text books, and the problems given by the teacher. Some of the topics that should necessary be covered in lab are listed below.

## Course outcomes:

Student should be able to write code snippets, and then compile, debug and execute them. The language of choice will be C. This is a skill course. More you practice, better it will be.

<b>Content: Practical</b>		<b>Hrs</b>	<b>Marks</b>
<b><u>Unit – 1</u></b>	Familiarization with programming environment (Editor, Compiler, etc.)		
<b><u>Unit – 2</u></b>	Programs using, I/O statements and various operators		
<b><u>Unit – 3</u></b>	Programs using expression evaluation and precedence		
<b><u>Unit – 4</u></b>	Programs using decision making statements and branching statements		
<b><u>Unit – 5</u></b>	Programs using loop statements		
<b><u>Unit – 6</u></b>	Programs to demonstrate applications of n dimensional arrays		
<b><u>Unit – 7</u></b>	Programs to demonstrate use of string manipulation functions		
<b><u>Unit – 8</u></b>	Programs to demonstrate parameter passing mechanism		
<b><u>Unit – 9</u></b>	Programs to demonstrate recursion		
<b><u>Unit – 10</u></b>	Programs to demonstrate use of pointers		
<b><u>Unit – 11</u></b>	Programs to demonstrate command line arguments		
<b><u>Unit – 12</u></b>	Programs to demonstrate dynamic memory allocation		
<b><u>Unit – 13</u></b>	Programs to demonstrate file operations

It will develop skills in students related to design development which emerges through a process of character analysis, based on the script and directorial concept.

**Objectives:** Students will be able to:

1. Understand different concepts of costume, fashion & design.
2. Understand elements of arts, principles of fashion design & different divisions in clothing industry.
3. Know about fashion & clothing industry.
4. Exposed to different concepts & terminologies used in fashion & clothing industry.

**RATIONALE:** Rapid changes and progress in textile industry has led to the advancement in the fabrics selected for manufacturing garments. Manufacturing of fiber and textiles for apparel, household and industrial use has great business opportunity. This course on Textile Science provides in-depth knowledge on different fibres available in the market, its mechanical production or engineering of fibres, the chemistry and physics involved in producing and testing fibres, principles of dyeing, printing and its operations, materials, equipment and process. This course will provide sound foundation for students undertaking course in costume designing and garment making.

**Objectives:** Students will be able to:

1. Select suitable textile fibres for a given application on the basis of physical and chemical properties.
2. Explain the characteristics of different types of fabrics based on type of yarn, weaves and other fabric construction processes.
3. Select appropriate dyes and printing method for given textile fibre and fabric respectively.

### **CONTENTS: THEORY**

	<b>Name of the Topic</b>	<b>Hrs</b>	<b>Marks</b>
<b>Unit-1</b>	<b>Introduction</b> 1.1 Terms and definition: Textile, Textile Science, Fibres, filaments, yarns ( spun yarns, filament yarns), sewing threads, Fabrics (woven, knitted, non-woven, etc.), Garment. 1.2 Importance of textile science in our life.	02	05
<b>Unit-2</b>	<b>Textile fibres</b> 2.1 Introduction and classification of textile fibres. 2.2 General fiber properties 2.3 Brief introduction about manufacturing processes, physical & chemical properties, their suitability in garment of following textile fibres: Cotton, Silk, Wool, Polyester, Viscose rayon, Acrylic, Nylon. 2.4 Identification of important textile fibres (Feeling and burning test).	10	15
<b>Unit-3</b>	<b>Yarns</b> 3.1 Brief outline of the process involved in the conversion of fibres into yarn. 3.2 Different types of yarn, their properties and suitability for garment. 3.3 Yarn twist. 3.4 Yarn count (definition, unit of yarn count, system of yarn count).	06	10

<b>Unit-4</b>	<p><b>Conversion of yarn into fabric</b> 4.1 Definition, objectives and principles of various methods of fabric formation – weaving, knitting, non-woven. End use of fabrics produced by these methods.</p> <p><b>4.2 Woven Fabric</b> 4.2.1 Basic loom, loom mechanisms and function of its various parts, warp &amp; weft yarns. <b>4.2.2 Woven design fundamentals:</b> Introduction, classification of woven structures, methods of weave representation, weave repeat, basic elements of woven design, types of draft plan and denting plans. Basic weaves and its modification (Plain weave, Twill weave, Satin and weaves). Brief idea about decorative weaves. Draft and peg-plan of weave.</p>	12	20
<b>Unit-5</b>	<p><b>Chemical Processing of Textile</b> 6.1 Introduction to various wet-processing treatments such as singeing, desizing, scouring, bleaching, mercerization.</p> <p><b>6.2 Dyeing:</b> Dyes &amp; its classification, Principles &amp; Properties of dyes, Application of natural and Synthetic dyes on different fibres and their blends. Different dyeing techniques. Introduction to dyeing machinery. Defects in dyeing and their remedies.</p> <p><b>6.3 Textile Printing:</b> Introduction, Difference between dyeing and printing. Methods of Printing such as Block Printing, Stencil Printing, Screen Printing, and Roller printing. Styles of Printing: Direct style of Printing, Resist style of Printing. Tie &amp; dye, Batik Printing, Discharge style of Printing.</p> <p><b>6.4 Finishing of fabrics:</b> Principle of finishing of natural, man-made fibres and blended fabrics. Wash-n-wear, crease-resistant anti-shrink, water-repellent, rot and mildew proofing, flame-proofing finishes, etc.</p>	12	20

**RATIONALE:** This course will provide hands on experiences to students specifically related to design concepts associated with Clothing construction, Art and design and Textile science. The content covered in the courses of Clothing construction, Art and design and Textile science help the students in carrying out the design aspects through illustration. Students will be able to learn through this course about structural designs, applied design and the drape of the fabric.

Objectives: The students will be able to:

- i. Illustrate different types of design effects required for costume design and dress making by drawing and sketching.
